**Application of Dimensional Analysis in Economics** W.M. Grudzewski, 2013-08-20 The modeling of economic phenomena and processes in terms of their static and dynamic features and with regard to the characteristics of their course is a major methodological trend in studies of the nature properties and functioning of contemporary management systems Models describing management systems must be of a multi aspect nature entailing aspects such as technical economic and sociological factors on the one hand and forecasting planning leading controlling etc on the other

Developing a method for incorporating such diverse data into a system of analysis is needless to say a complex process. Dimensional analysis is a tool which might be useful in this process but one which up to now has been little explored in the economic sciences. This book explores the application of dimensional analysis in the field of economics. It has been structured in a way which corresponds to the formulation of economic quantities and is divided into five sections: measuring of economic quantities, modeling of economic processes, principles of dimensional analysis, building of quantified dimensional models, and experiment and practical verification. The New Managerial Economics William Boyes, 2005-07-20. The book focuses on business strategy and the usefulness of economics to the manager. The book provides a window into the strategic workings of the modern firm: businesses small and large, domestic and multinational, and businesses that provide a wide array of products and services. Each chapter begins with an introductory case profiling a company. Near the end of chapter the case is reviewed, enabling the students to examine the company's choices in light of underlying chapter concepts.
