## **Shafarevich Maps And Automorphic Forms:**

Shafarevich Maps and Automorphic Forms János Kollár, 2014-07-14 The aim of this book is to study various geometric properties and algebraic invariants of smooth projective varieties with infinite fundamental groups This approach allows for much interplay between methods of algebraic geometry complex analysis the theory of harmonic maps and topology Making systematic use of Shafarevich maps a concept previously introduced by the author this work isolates those varieties where the fundamental group influences global properties of the canonical class The book is primarily geared toward researchers and graduate students in algebraic geometry who are interested in the structure and classification theory of algebraic varieties There are however presentations of many other applications involving other topics as well such as Abelian varieties theta functions and automorphic forms on bounded domains The methods are drawn from diverse sources including Atiyah's L2 index theorem Gromov's theory of Poincaré series and recent generalizations of Kodaira's vanishing theorem Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

**Representations of Fundamental Groups of Algebraic Varieties** Kang Zuo, 2006-11-14 Using harmonic maps non linear PDE and techniques from algebraic geometry this book enables the reader to study the relation between fundamental groups and algebraic geometry invariants of algebraic varieties The reader should have a basic knowledge of algebraic geometry and non linear analysis This book can form the basis for graduate level seminars in the area of topology of algebraic varieties It also contains present new techniques for researchers working in this area

**Mathematical Aspects of Quantization** Sam Evens, 2012 This book is a collection of expository articles from the Center of Mathematics at Notre Dame's 2011 program on quantization Included are lecture notes from a summer school on quantization on topics such as the Cherednik algebra geometric quantization detailed proofs of Willwacher's results on the Kontsevich graph complex and group valued moment maps This book also includes expository articles on quantization and automorphic forms renormalization Berezin Toeplitz quantization in the complex setting and the commutation of quantization with reduction as well as an original article on derived Poisson brackets The primary goal of this volume is to make topics in quantization more accessible to graduate students and researchers

Several Complex Variables Michael Schneider, Yum-Tong Siu, 1999 Expository articles on Several Complex Variables and its interactions with PDEs algebraic geometry number theory and differential geometry first published in 2000

**Lectures on Kähler Groups** Pierre Py, 2025-03-25 An introduction to the state of the art in the study of Kähler groups This book gives an authoritative and up to date introduction to the study of fundamental groups of compact Kähler manifolds known as Kähler groups Approaching

the subject from the perspective of a geometric group theorist Pierre Py equips readers with the necessary background in both geometric group theory and Kähler geometry covering topics such as the actions of Kähler groups on spaces of nonpositive curvature the large scale geometry of infinite covering spaces of compact Kähler manifolds and the topology of level sets of pluriharmonic functions Presenting the most important results from the past three decades the book provides graduate students and researchers with detailed original proofs of several central theorems including Gromov and Schoen's description of Kähler group actions on trees the study of solvable quotients of Kähler groups following the works of Arapura Beauville Campana Delzant and Nori and Napier and Ramachandran's work characterizing covering spaces of compact Kähler manifolds having many ends It also describes without proof many of the recent breakthroughs in the field Lectures on Kähler Groups also gives in eight appendixes detailed introductions to such topics as the study of ends of groups and spaces groups acting on trees and Hilbert spaces potential theory and  $L^2$  cohomology on Riemannian manifolds *Algebraic Geometry*

*Santa Cruz 1995* János Kollár, David R. Morrison, 1997 *Fundamental Groups of Compact Kahler Manifolds* Jaume Amorós, 1996 This book is an exposition of what is currently known about the fundamental groups of compact Kähler manifolds This class of groups contains all finite groups and is strictly smaller than the class of all finitely presentable groups For the first time ever this book collects together all the results obtained in the last few years which aim to characterize those infinite groups which can arise as fundamental groups of compact Kähler manifolds Most of these results are negative ones saying which groups do not arise The methods and techniques used form an attractive mix of topology differential and algebraic geometry and complex analysis The book would be useful to researchers and graduate students interested in any of these areas and it could be used as a textbook for an advanced graduate course One of its outstanding features is a large number of concrete examples The book contains a number of new results and examples which have not appeared elsewhere as well as discussions of some important open questions in the field **Featured Reviews in "Mathematical Reviews"**

**1995-1996** Donald G. Babbitt, Jane E. Kister, This collection of reprinted Featured Reviews published in Mathematical Reviews MR in 1995 and 1996 makes widely available informed reviews of some of the best mathematics published recently Featured Reviews were introduced in MR at the beginning of 1995 in part to provide some guidance to the current research level literature With the exponential growth of publications in mathematical research in the first half century of MR it had become essentially impossible for users of MR to identify the most important new research level books and papers especially in fields outside of the user's own expertise This work identifies some of the best new publications papers and books that are expected to have a significant impact on the area of pure or applied mathematics with which researchers are concerned All of the papers reviewed here contain interesting new ideas or applications a deep synthesis of existing ideas or any combination of these The volume is intended to lead the user to important new research across all fields covered by MR **The Asian Journal of Mathematics**, 2004 **The Cumulative Book Index**, 1996 A world list of books in the English language
