

Influence of tillage on soil physical properties:

- Tillage has considerable influence on soil physical properties like pore space, structure, bulk density, water content and colour.
- These effects of tillage last for about a month. Tillage practices have therefore greatest effect on seed germination, seedling emergence and stand establishment.

Types of Tillage:

1. On Season Tillage: It is done during the cropping season (June-July or Sept-Oct)
2. Off Season Tillage: It is done during fallow or non-cropped season (Summer)
3. Special Types of Tillage: It is done at any time with some special objective/purpose.

Sumner, 1999-08-31 The Handbook of Soil Science provides a resource rich in data that gives professional soil scientists agronomists engineers ecologists biologists naturalists and their students a handy reference about the discipline of soil science This handbook serves professionals seeking specific factual reference information Each subsection includes a description of concepts and theories definitions approaches methodologies and procedures tabular data figures and extensive references **Advances in Soil Science**, 2012-12-06 The purpose of Advances in Soil Science is to provide a forum for leading scientists to analyze and summarize the available scientific information on a subject assessing its importance and identifying additional research needs A wide array of subjects has been addressed by authors from many countries in the initial ten volumes of the series The quick acceptance of the series by both authors and readers has been very gratifying and confirms our perception that a need did exist for a medium to fill

the gap between the scientific journals and the comprehensive reference books This volume is the first of the series devoted entirely to a single topic soil degradation Future volumes will include both single topic volumes as well as volumes containing reviews of different topics of soil science as in the case of the first ten volumes There are increasing concern and attention about managing natural resources particularly soil and water Soil degradation is clearly one of the most pressing problems facing mankind Although the spotlight regarding soil degradation in recent years has focused on Africa concern about the degradation of soil and water resources is worldwide The widespread concern about global environmental change is also being linked to severe problems of soil degradation Therefore we are indeed pleased that the first volume of the series devoted to a single topic addresses such an important issue The current volume is also the first of the series involving a guest editor
