

Document 11: Psychology - Cognitive Dissonance Theory, Extensions, and Critiques □

I. Foundational Principles of Cognitive Dissonance Theory (CDT)

Cognitive Dissonance Theory (CDT), pioneered by **Leon Festinger (1957)**, remains a cornerstone of social psychology, explaining the powerful internal drive to maintain **cognitive consistency**. The theory posits that the simultaneous holding of two or more psychologically inconsistent cognitions (beliefs, attitudes, or behaviors) creates an aversive state of tension (dissonance) that the individual is motivated to reduce.

A. The Structure of Cognitions

Festinger classified relationships between cognitions into three types:

1. **Irrelevant:** The cognitions have no bearing on each other (e.g., "I like cats" and "The sky is blue").
2. **Consonant:** The cognitions are consistent with each other (e.g., "I value my health" and "I eat vegetables daily").
3. **Dissonant:** The cognitions are inconsistent and create psychological tension (e.g., "I value the environment" and "I drive a gas-guzzling car").

B. Calculating the Magnitude of Dissonance

The degree of discomfort is not uniform; it is a function of the **ratio of dissonant to consonant cognitions** and the **importance** of the cognitions involved. Dissonance is maximized when the conflicting beliefs are central to one's self-concept or values.

$$\text{Magnitude of Dissonance} = \frac{\text{Sum of importance of dissonant cognitions}}{\text{Sum of importance of dissonant and consonant cognitions}}$$

II. Dissonance Paradigms and Experimental Evidence

CDT is typically studied through three major experimental paradigms that manipulate the conditions under which dissonance is produced.

A. Insufficient Justification (The \$1/\$20 Study)

This classic paradigm explores how people rationalize performing an undesirable act for a small reward.

- **The Mechanism:** When external justification for a behavior is low (e.g., a \$1 reward for lying), the dissonance between the belief ("The task was boring") and the action ("I told the next person it was fun") is high. The easiest path to dissonance reduction is to change the internal attitude ("The task actually wasn't that bad").
- **Key Finding:** Low external incentive leads to high internal attitude change.

B. Justification of Effort

This paradigm demonstrates that if a person voluntarily endures a difficult, painful, or costly initiation to achieve a goal, they will increase their liking and valuation of that goal.

- **The Mechanism:** Dissonance arises between the cognition "I endured suffering to achieve X" and "The achieved goal X is mediocre." To resolve this, the individual

Approaches to Language: Data, Theory, and Explanation Ángel J. Gallego, Aritz Irurtzun, 2020-12-24 The study of language has changed substantially in the last decades In particular the development of new technologies has allowed the emergence of new experimental techniques which complement more traditional approaches to data in linguistics like informal reports of native speakers judgments surveys corpus studies or fieldwork This move is an enriching feature of contemporary linguistics allowing for a better understanding of a phenomenon as complex as natural language where all sorts of factors internal and external to the individual interact Chomsky 2005 This has generated some sort of divergence not only in research approaches but also in the phenomena studied with an increasing specialization between subfields and accounts At the same time it has also led to subfield isolation and methodological a priori with some researchers even claiming that theoretical linguistics has little to offer to cognitive science see for instance Edelman Phillips den Dikken Bernstein Tortora Sprouse Sch tze Phillips 2013

Psycholinguistics (PLE: Psycholinguistics) Alan Garnham, 2013-10-23 Originally published in 1985 this title was an important new teaching text at the time Alan Garnham focuses on current theories about the central cognitive aspects of language understanding and attempts to reflect the emergence of cognitive science an inter disciplinary approach to the study of language and other cognitive processes As well as describing psychological studies the text includes ideas from linguistics artificial intelligence the philosophy of language and formal logic Some introductory remarks on the study of language understanding precede a discussion of word recognition and the computation of the syntactic structure of sentences The central part of the book is concerned with questions about meaning the mental representation of word meanings and text comprehension The final two chapters address questions of how the

parts of the language processing system operate together and how language production is related to comprehension Rather than attempting an exhaustive discussion of empirical research on his chosen topics the author gives the reader the flavour of linguistic arguments In particular Psycholinguistics attempts to indicate the problems and also the possibilities of relating experimental data to theories of language processing Psycholinguistics will still be useful reading on courses in psycholinguistics language and thought and cognitive psychology Analytic Psychology George Frederick Stout,1896
