Innovation, and Growth in the History of Asian Civilizations Peter Bernholz, Roland Vaubel, 2004 Do political decentralisation and inter state competition favour innovation and growth There has long been a lively debate surrounding this question going back to David Hume and Immanuel Kant This book is a new attempt to test its veracity The existing literature tends to assume that the beneficial effects of inter state competition have been confined to European history By contrast China India and the Islamic Middle East are regarded as inherently imperial and overcentralised However these civilisations have not always been unified politically. In their history there have been long spells of decentralised rule or interstate competition. The same is true for Japan If the Hume Kant hypothesis is correct it should also apply to those periods This volume analyses the qualitative and quantitative evidence The authors comprise eminent historians sociologists economists and socio psychologists and the resulting book is a truly interdisciplinary enterprise Addressing a wide readership this book will hold strong appeal for scholars and researchers of general Asian and economic history political economy political science and Isaac Newton's Philosophy of Sacred Space and Sacred Time Gregory Gillette, 2007 This study contributes to sociology the debate over the relationship between science and religion by examining Sir Isaac Newton's construal of space and time in his Principia Mathematica and other important works This book should appeal to scholars interested in the philosophy of religion theology and the history of science thought and writings of Sir Isaac Newton attempting to illustrate his portrayal of both of these as sacred not merely material entities After analyzing Newton's principal texts the author proceeds to consider his understandings in relation to the philosophical and theological work of American critical conservative Paul Elmer More demonstrating their agreement concerning the havoc wrought in the modern world by the illegitimate extensions of hypothetical science into philosophies of life and society Finally the book considers the implications of viewing space and time with Newton and others in a sacred manner and the resulting limitations on human knowledge This book offers an interesting contribution to current debates concerning the relationship between science and religion and will appeal to those who study the philosophy of religion theology and the history of science The Best Books for Academic Libraries:
