mathematical fundamentals illustrated with many examples using SAR data with a main focus on remote sensing of the earth. The book begins with basics of synthetic aperture radar to provide the basis for understanding how polarimetric SAR images are formed and gives an introduction to the fundamentals of radar polarimetry. It goes on to discuss more advanced polarimetric concepts that allow one to infer more information about the terrain being imaged. In order to analyze data quantitatively the signals must be calibrated carefully which the book addresses in a chapter summarizing the basic calibration algorithms. The book concludes with examples of applying polarimetric analysis to scattering from rough surfaces to infer soil moisture from radar signals.

Polarimetric Synthetic Aperture Radar Irena Hajnsek, Yves-Louis

Desnos, 2021-03-24 This open access book focuses on the practical application of electromagnetic polarimetry principles in Earth remote sensing with an educational purpose. In the last decade the operations from fully polarimetric synthetic aperture radar such as the Japanese ALOS Palsar, the Canadian Radarsat 2 and the German TerraSAR X and their easy data access for scientific use have developed further the research and data applications at L, C and X band. As a consequence the wider distribution of polarimetric data sets across the remote sensing community boosted activity and development in polarimetric SAR applications also in view of future missions. Numerous experiments with real data from spaceborne platforms are shown with the aim of giving an up to date and complete treatment of the unique benefits of fully polarimetric synthetic aperture radar data in five different domains: forest, agriculture, cryosphere, urban and oceans.

Polarisation:

Applications in Remote Sensing Shane Cloude, 2009-10-01 This book combines for the first time the topics of radar polarimetry and interferometry. This combination was first developed in 1997 and has since become a major topic in radar sciences and their applications in particular to space sciences. In its simplest form it concerns the study of interferograms formed by combining waves with different polarisations and their exploitation to infer important physical properties of the planetary surface being investigated. The book is written in three main sections. The first four chapters provide a detailed coverage of all major topics of polarimetry including its basis in electromagnetic scattering theory, decomposition theorems and a detailed analysis of the entropy-alpha approach. The next chapter offers a brief introduction to radar interferometry before developing in three chapters the important new topic of polarimetric interferometry. In this way the book provides a complete treatment of the subject suitable for those working in interferometry who wish to know about polarimetry or vice versa as well as those new to the topic who are looking for a one stop comprehensive treatment of the subject. The emphasis throughout is on the application of these techniques to remote sensing and the book concludes with a set of practical examples to illustrate the theoretical ideas.

Weather Radar Polarimetry Guifu Zhang, 2016-08-19 This book presents the fundamentals of polarimetric radar remote sensing through understanding wave scattering and propagation in geophysical media filled with hydrometers and other objects. The text characterizes the physical, statistical and electromagnetic properties of hydrometers and establishes the relations between radar observables and physical state parameters. It introduces

advanced remote sensing techniques such as polarimetric phased array radar and retrieval methods for physical parameters. The book also illustrates applications of polarimetric radar measurements in hydrometeor classification, particle size distribution retrievals, microphysical parameterization, and weather quantification and forecast. *Direct and Inverse Methods in Radar Polarimetry* W.M. Boerner, Leonard A. Cram, William A. Holm, David E. Stein, Werner Wiesbeck, Wolfgang Keydel, Dino Giuli, Dag T. Gjessing, Frédéric A. Molinet, Hans Brand, 2013-11-09. This foreword deals exclusively with the planning, organization, and execution of the Workshop's scientific as well as cultural programs. It is opened with a synopsis on how the global political changes that occurred immediately after the Workshop caused the delay in producing the proceedings, followed by a brief exposition on the need, timeliness, and importance of this second ARW in the field of electromagnetic imaging, radar remote sensing, and target versus clutter discrimination, and an outline of the objectives. An informal discussion about some of the organizational details, a retrospective summary of events, and a preview of the third workshop planned for 1993 September 19-25 is intended to recapture the spirit of this second NATO Advanced Research Workshop 1988 September 18-24 and will reveal how successful it was in comparison to the first of 1983 September 18-24, how its accomplishments may be appreciated, and why a third and last workshop was requested by its participants to take place during 1993 September 19-25.
