Rogers,1999 We use new disaggregated data on consumer prices to determine why there is variability in prices of similar goods across U S cities We address questions similar to those that have arisen in the international context is this variability purely a result of market segmentation or do sticky nominal prices play a role We also examine how the degree of tradability of a good influences price variability Surprisingly we find that variability is larger for traded goods We attribute this finding

to greater price stickiness for non traded goods Distance between cities accounts for a significant amount of the variation in prices between pairs of cities But we also find that nominal price stickiness plays an even more significant role **Working Paper Series** ,1999 **Computer-readable Data Bases** ,1990 Directory of 2805 database in 2509 entries Science technology medicine business law humanities and social sciences are covered Entries give such detailed information as data elements subject matter and user aids Name subject producer and processor indexes **Choice** ,2006 **Computer Buyer's Guide and Handbook** ,2000-08 **Forbes** ,1999 Uplink ,2004 The forum for computer assisted reporting

**Consumption Over the Life Cycle** Pierre-Olivier Gourinchas,Jonathan A. Parker,2000 This paper employs a synthetic cohort technique and Consumer Expenditure Survey data to construct average age profiles of consumption and income over the working lives of typical households across different education and occupation groups Using these profiles we estimate a structural model of optimal life cycle consumption expenditures in the presence of realistic labor income uncertainty The model fits the profiles quite well In addition to providing tight estimates of the discount rate and risk aversion we find that consumer behavior changes strikingly over the life cycle Young consumers behave as buffer stock agents Around age 40 the typical household starts accumulating liquid assets for retirement and its behavior mimics more closely that of a certainty equivalent consumer This change in behavior is mostly driven by the life cycle profile of expected income Our methodology provides a natural decomposition of saving into its precautionary and retirement components **Tax Policy and Consumer Spending** Katsunori Watanabe,Takayuki Watanabe,Tsutomu Watanabe,1999 This paper studies the extent to which the impact of tax policy on consumer spending differs between temporary and permanent as well as anticipated and unanticipated tax changes To discriminate between them we use institutional information such as legal distinction between temporary and permanent tax changes as well as timing of policy announcement and implementation We find that the impact of temporary changes is significantly smaller than the impact of permanent changes We also find that more than 80 per cent of Japanese consumers including those who distinguish between temporary and permanent tax changes respond to tax changes at the time of their implementation and not at the time of a policy announcement We suggest an interpretation that these consumers follow a near rational decision rule **The Top American Research Universities** ,2010

**Determinants of the Japan Premium** Joe Peek,Eric S. Rosengren,1998 Since August 1995 Japanese banks have had to pay a premium on Eurodollar and Euroyen interbank loans relative to their U S and U K competitors This so called Japan

premium provides a market indicator of investor anxiety about the ability of Japanese banks to repay loans. We examine the determinants of the Japan premium and find that government announcements not associated with concrete actions had little impact. On the other hand, announcements of concrete actions by the Japanese government such as injections of funds into the banking system tended to have an effect on the size of the Japan premium.
