Ludicrous Edward Niedermeyer, 2019-08-20 Tesla is the most exciting car company in a generation but can it live up to the hype Tesla Motors and CEO Elon Musk have become household names shaking up the staid auto industry by creating a set of innovative electric vehicles that have wowed the marketplace and defied conventional wisdom The company's market valuation now rivals that of long established automakers and to many industry observers Tesla is defining the future of the industry But behind the hype Tesla has some serious deficiencies that raise questions about its sky high valuation and even its ultimate survival Tesla's commitment to innovation has led it to reject the careful zero defects approach of other car manufacturers even as it struggles to mass produce cars reliably and with minimal defects While most car manufacturers struggle with the razor thin margins of mid priced sedans Tesla's strategy requires that the Model 3 finally bring it to profitability even as the high priced Roadster and Model S both lost money And Tesla's approach of continually focusing on the future even as commitments and deadlines are repeatedly missed may ultimately test the patience of all but its most devoted fans In Ludicrous journalist and auto industry analyst Edward Niedermeyer lays bare the disconnect between the popular perception of Tesla and the day to day realities of the company and the cars it produces Blending original reporting and never before published insider accounts with savvy industry analysis Niedermeyer tells the story of Tesla as it's never been told before with clear eyes objectivity and insight

Wirtschaftswissenschaft Lehrstuhl für Angewandte Statistik language English abstract The CAPM provides a single state single factor general equilibrium theory of the risk return relation However in the 1960s Mandelbrot 1963 already observed stock returns to have a very peaked distribution with heavy tails and also periods of persistent volatility which contradicts the CAPM In response to these observations the Conditional CAPM C CAPM has been discussed by several authors In a C CAPM investors can price an asset or portfolio conditional on the available information at a point in time This is done by replacing the unconditional by conditional moments of returns Statistically processes of Generalized Autoregressive Conditional Heteroscedasticity GARCH can capture the so called stylized facts some observed by Mandelbrot 1963 GARCH models were developed by Engle 1982 and Bollerslev 1986 and try to model time varying second moments of asset returns If a GARCH process is assumed for the disturbance term in a C CAPM a GARCH in mean model GARCH M can be estimated where the conditional variance or covariance impacts the conditional expectation of excess returns The GARCH M can model time varying conditional moments but also time varying risk premia and the implied beta factor As for this seminar paper I mostly follow the comprehensive dissertation Das CAPM mit zeitabhängigen Beta Faktoren of Linnenbrink 1998 and the paper of Bollerslev et al 1988 First the theoretical foundations of the CAPM the C CAPM GARCH processes and the GARCH M extension are presented Then in the empirical part I estimate a univariate GARCH M representation of the C CAPM I compare its performance to a traditional CAPM with a single stock portfolio of an investor selected stock Tesla Inc
