permeated her life and as she embarked on a science writing career she realized there were psychological connections between this feeling of being an outsider and both her struggles and successes later in life She decided to reach out to other people who were unique in their environments to see if they had experienced similar feelings of alienation and if so to learn how they overcame them *Weird* is based on in person interviews with many of these individuals such as a woman who is professionally surrounded by men a liberal in a conservative area and a Muslim in a predominantly Christian town In addition it provides actionable insights based on interviews with dozens of experts and a review of hundreds of scientific studies *Weird* explores why it is that we crave conformity how that affects people who are different and what they can do about it First the book dives into the history of social norms and why some people hew to them more strictly than others Next Khazan explores the causes behind and the consequences of social rejection She then reveals the hidden upsides to being weird as well as the strategies that people who are different might use in order to achieve success in a society that values normalcy Finally the book follows the trajectories of unique individuals who either decided to be among others just like them to stay weird or to dwell somewhere in between Combining Khazan s own story with those of others and with fascinating takeaways from cutting edge psychology research *Weird* reveals how successful individuals learned to embrace their weirdness using it to their advantage

Cormier,Kanwaljeet J. S. Anand,2017-09-28 Burn out and suicide rates among physicians and scientists in academic medicine are at an all time high and jeopardize the future of our entire profession In the last 4 years alone burn out rates among physicians have increased by 25% In a recent 2017 Medscape publication burn out rates in Critical Care physicians ranked in 9th place and Pediatricians ranked 13th among 27 subspecialties Astonishingly over 50% of the participants reported burn out symptoms with clear race and gender disparities While men generally report higher burn out rates than women it is important to emphasize that response rates from women in these surveys were notoriously low and may not represent the complete picture These numbers are even more dismal for tenured academic faculty at research extensive universities In this group emotional exhaustion i e high burn out is reported at 35% with a clear association with age and lower burn out levels in the older tenured faculty While no gender or racial ethnic differences were found in this particular group higher levels of burn out were identified in individuals with financial responsibilities beyond a spouse and child While it is comforting to note the increasing public interest and research activities in this field successful approaches to ameliorate the burden and consequences of physician burn out are still inadequately developed Academic centers increasingly offer some type of work

life balance program to their employees but unfortunately these programs are frequently adopted from corporate business models and remain largely ineffective in the academic environment It should be evident to most administrators that the stressors of academic clinicians and scientists substantially differ from those of corporate employees Based on these observations and over 75 years of combined experience in academic medicine amongst the three editors of this Research Topic we collected 26 manuscripts from 22 authors at different career stages and different genders ethnicities marital status and subspecialties to identify and stratify common and specific stressors and therapeutic approaches to ameliorate burn out and achieve work life balance in academic medicine We are confident that each reader will identify with at least one if not several of the authors opinions experiences and approaches to attain greater work life balance and thereby avoid the consequences of burn out in modern academic medicine
