The Bhutan Electric Vehicle Initiative Da Zhu,Dominic Pasquale Patella,Roland Steinmetz,Pajnapa Peamsilpakulchorn,2016-04-06 As the country that inspires the world with gross national happiness development philosophy Bhutan is striving to pursue its economic growth while committing to its core values of inclusive and green development

Even with robust economic growth rates Bhutan's dependence on imports and hydropower revenues drives the country to search for self-reliant options to fuel the economy while further decarbonizing the economy. Electric vehicle is being explored as one of the key policies to introduce green mobility, reduce fossil fuel imports and put the country firmly on a green growth path. Globally, electric vehicles market and technology are still in the nascent stage but are developing rapidly. The automotive industry has adopted electrification as a pillar of future drive train technology. EV uptake is expected to increase significantly with ongoing improvements in technology and resulting cost decreases in the global market. This report aims to help Bhutan think through various technical and policy issues of introducing electric vehicles in its own context. It analyses a variety of factors that will impact adoption of electric vehicles from technical, market and financial feasibility to consumer awareness and stakeholders capacity. It also addresses several policy questions which are at the heart of public debate such as affordability of the government to undertake the program, economic costs and benefits, distributional impact, fiscal and macroeconomic implications. Drawing from vast international experiences, the report examines in great technical details how global cutting edge technology like electric vehicles could be pursued in the context of developing economies with different socio-economic characteristics and constraints compared to advanced economies. It will help readers better grasp the technical, financial, economic and social challenges as well as opportunities in initiating electric vehicles program and provide practical recommendations that will be useful for policy makers in designing their own EV initiative.

Integration of Renewable and Distributed Energy Resources in Power Systems Tomás Gómez San Román, José Pablo Chaves-Áila, 2020-12-02. The electric power sector is poised for transformative changes. Improvements in the cost and performance of a range of distributed energy generation (DG) technologies and the potential for breakthroughs in distributed energy storage (DS) are creating new options for onsite power generation and storage, driving increasing adoption and impacting utility distribution system operations. In addition, changing uses and use patterns for electricity from plug-in electric vehicles (EVs) to demand response (DR) are altering demands placed on the electric power system. Finally, the infusion of new information and communications technology (ICT) into the electric system and its markets is enabling the collection of immense volumes of data on power sector operations and use, unprecedented control of generation networks and loads, and new opportunities for the delivery of energy services. In this Special Issue of *Energies*, research papers on topics related to the integration of distributed energy resources (DG, DS, EV and DR) are included. From technologies to software tools to system-wide evaluations, the impacts of all aforementioned distributed resources on both operation and planning are examined.
