Semiconductor Interfaces And Microstructures:

Semiconductor Interfaces, Microstructures and Devices Zhe Chuan Feng, 1993-01-01 A semiconductor interface is the contact between the semiconductor itself and a metal. The interface is a site of change and it is imperative to ensure that the semiconducting material is sealed at this point to maintain its reliability. This book examines various aspects of interfaces showing how they can affect microstructures and devices such as infrared photodetectors as used in nightsights and blue diode lasers. It presents various techniques for examining different types of semiconductor material and suggests future potential commercial applications for different semiconductor devices. Written by experts in their fields and focusing on metallic semiconductors Cadmium Telluride and related compounds this comprehensive overview of recent developments is an essential reference for those working in the semiconductor industry and provides a concise and comprehensive introduction to those new to the field.

Semiconductor Interfaces And Microstructures Zhe Chuan Feng, 1992-08-31 Recently there have been major achievements in the study of semiconductor interfaces and microstructures for different materials and structural systems. Progress has been made through various experimental technologies and theoretical methods. This book provides an up to date review on these advances and includes the following major subjects: IV-IV, III-V and II-VI semiconductors and metal semiconductor structures; new developments in growth methods; electric, optical, magnetic and structural characterization and properties; relative theories; electronic transport; phonons and interface modes; devices and applications. These materials are organized into four sections: General; III-V; II-VI and IV-IV which offer comprehensive information and help readers in following the new developments in the research frontiers of the above fields.

Raman Scattering on Emerging Semiconductors and Oxides Zhe Feng, 2024-09-16 Raman Scattering on Emerging Semiconductors and Oxides presents Raman scattering studies. It describes the key fundamental elements in applying Raman spectroscopies to various semiconductors and oxides without complicated and deep Raman theories. Across nine chapters it covers SiC and IV-IV semiconductors; III-V GaN and nitride semiconductors; III-V and II-VI semiconductors; ZnO based and GaO based semiconducting oxides; Graphene ferroelectric oxides and other emerging materials; Wide bandgap semiconductors of SiC, GaN and ZnO and Ultra wide gap semiconductors of AlN, Ga₂O₃ and graphene. Key achievements from the author and collaborators in the above fields are referred to and cited with typical Raman spectral graphs and analyses. Written for engineers, scientists and academics, this comprehensive book will be fundamental for newcomers in Raman spectroscopy. Zhe Chuan Feng has had an impressive career spanning many years of important work in engineering and tech including as a professor at the Graduate Institute of Photonics establishing the Science Exploring Lab joining Kennesaw State University as an adjunct professor part time and at the Department of Electrical and Computer Engineering Southern Polytechnic College of Engineering and Engineering Technology. Currently he is focusing on materials research for LED, III nitrides, SiC, ZnO, other semiconductors, oxides and nanostructures and has devoted time to materials research and growth of III-V and II-VI.

compounds LED III nitrides SiC ZnO GaO and other semiconductors oxides Professor Feng has also edited and published multiple review books in his field alongside authoring scientific journal papers and conference proceeding papers He has organized symposiums and been an invited speaker at different international conferences and universities He has also served as a guest editor for special journal issues Heteroepitaxy of Semiconductors John E. Ayers,Tedi Kujofsa,Paul

Rago,Johanna Raphael,2016-10-03 In the past ten years heteroepitaxy has continued to increase in importance with the explosive growth of the electronics industry and the development of a myriad of heteroepitaxial devices for solid state lighting green energy displays communications and digital computing Our ever growing understanding of the basic physics and chemistry underlying heteroepitaxy especially lattice relaxation and dislocation dynamic has enabled an ever increasing emphasis on metamorphic devices To reflect this focus two all new chapters have been included in this new edition One chapter addresses metamorphic buffer layers and the other covers metamorphic devices The remaining seven chapters have been revised extensively with new material on crystal symmetry and relationships III nitride materials lattice relaxation physics and models in situ characterization and reciprocal space maps **Delta-doping of Semiconductors** E. F.

Schubert,1996-03-14 This book is the first to give a comprehensive review of the theory fabrication characterisation and device applications of abrupt shallow and narrow doping profiles in semiconductors Such doping profiles are a key element in the development of modern semiconductor technology After an introductory chapter setting out the basic theoretical and experimental concepts involved the fabrication of abrupt and narrow doping profiles by several different techniques including epitaxial growth is discussed The techniques for characterising doping distributions are then presented followed by several chapters devoted to the inherent physical properties of narrow doping profiles The latter part of the book deals with specific devices The book will be of great interest to graduate students researchers and engineers in the fields of semiconductor physics and microelectronic engineering *Semiconductor Characterization* W. Murray Bullis,David G.

Seiler,Alain C. Diebold,1996 Market Those in government industry and academia interested in state of the art knowledge on semiconductor characterization for research development and manufacturing Based on papers given at an International Nist Workshop in January 1995 Semiconductor Characterization covers the unique characterization requirements of both silicon IC development and manufacturing and compound semiconductor materials devices and manufacturing Additional sections discuss technology trends and future requirements for compound semiconductor applications Also highlighted are recent developments in characterization including in situ in FAB and off line analysis methods The book provides a concise effective portrayal of industry needs and problems in the important specialty of metrology for semiconductor technology
