Discrete Event Modeling and Simulation Technologies Hessam S. Sarjoughian,Francois E. Cellier,2013-03-09 The initial ideas behind this edited volume started in spring of 1998 some two years before the sixtieth birthday of Bernard P Zeigler The idea was to bring together distinguished researchers colleagues and former students of Professor Zeigler to present their latest findings at the AIS 2000 conference During the spring of 1999 the initial ideas evolved into creating a volume of articles surrounding seminal concepts pertaining to modeling and simulation as proposed developed and advocated by Professor Zeigler throughout his scientific career Also included would be articles describing progress covering related aspects of software engineering and artificial intelligence As this volume is emphasizing concepts and ideas spawned by the work of Bernard P Zeigler it is most appropriate to offer a biographical sketch of his scientific life thus putting into a historical perspective the contributions presented in this volume as well as new research directions that may lie ahead Bernard P Zeigler was born March 5 1940 in Montreal Quebec Canada where he obtained his bachelor s degree in engineering physics in 1962 from McGill University Two years later having completed his MS degree in electrical engineering at the Massachusetts Institute of Technology he spent a year at the National Research Council in Ottawa Returning to academia he became a Ph D student in computer and communication sciences at the University of Michigan Ann Arbor Adaptivity and Learning Reimer Kühn,Randolf Menzel,Wolfram Menzel,Ulrich Ratsch,Michael M. ,1996 Measuring Interdiction Capabilities in the Presence of Anti-access Strategies Paul K. Davis, Jimmie McEver, Barry Wilson, 2002 This book discusses how U S capabilities for interdicting invading ground forces in the Persian Gulf can be adapted over time to maintain the ability to achieve an early halt or to counter maneuver forces in other plausible campaigns The authors emphasize exploratory analysis under massive uncertainty about political and military developments and about the detailed circumstances of conflict The book documents a specialized model used for mission system analysis which helps identify critical enablers of early halt capability deployment immediate command control intelligence surveillance and reconnaissance ability to employ interdiction forces quickly and weapon effectiveness The United States should expect threatened or actual use of mass casualty weapons against its forces and regional allies and enemy attempts to act quickly and with short warning On the other hand the threat s size and quality may be less than usually assumed On the military side the book characterizes parametrically the conditions for a successful early halt thereby identifying high priority strategic hedges capability developments and potential adaptations The book considers joint forces for interdiction and synergy with rapidly employable ground forces On the political side the book notes the premium on continued forward basing aggressive use of ambiguous warning and long range bombers Continued enforcement of red line constructs could greatly improve the likelihood of decisive response to ambiguous warning Countering anti access strategies would be enhanced by negotiating use of more distant bases and logistic preparation It will be increasingly unwise to assume use of forward bases even if technical analysis suggests that the bases could operate under attacks with mass casualty weapons *Storage and Retrieval for Media Databases* ,2001
