Primate Nervous System:

The Primate Nervous System, Part I Floyd E. Bloom, A. Bjorklund, T. Hokfelt, 1997-05-07 This volume is a new timely and fitting extension to the Handbook of Chemical Neuroanatomy focussing on the neurochemical circuitry of the primate brain The book will compliment the growing efforts to apply the analytical strategies of chemical neuroanatomy to the primate brain The goal of this volume is to develop a broad based coverage of human and non human primate chemical neuroanatomic details together within a volume in which details on transmitters and systems can be appreciated The eight comprehensive chapters that comprise this volume deal with large global concepts and datasets which not only create an initial coverage of the entire primate neuraxis but also capture useful points of information on the chemical neuroanatomy of the primate nervous system An excellent informative book and a welcome addition to the sparse literature in this field

Handbook of Chemical Neuroanatomy: The primate nervous system, pt. 2 Anders Björklund, Tomas Hökfelt, 1998

Primate Communication Katja Liebal, Bridget M. Waller, Katie E. Slocombe, Anne M. Burrows, 2014 Multimodal approach to primate communication with focus on its cognitive foundations and how this relates to theories of language evolution

Evolutionary and Genetic Biology of Primates V1 John Buettner-Janusch, 2012-12-02 Evolutionary and Genetic Biology of Primates Volume I presents research on the evolution and genetic biology of the Primates This volume comprises seven chapters that tackle the problem of primate classification anatomy and genetics The first chapter deals with an eventual serious reorganization of the classification of the Primates followed by a discussion on a critical reappraisal of tertiary primates from different periods such as Paleocene Eocene Oligocene Miocene and Pliocene The subsequent chapter examines the phylogenetic implications of neural structures in both morphological and physiological terms The book also presents comparative studies on the differences between skin of primates and that of man the sweat glands of the Lorissidae and the nerve endings in the skin of primates Lastly methods for primate chromosomes and their evolution are described This book is an invaluable source for physical anthropologists and researchers histologists anatomists neurologists geneticists cytologists and other specialists

Handbook of Chemical Neuroanatomy Floyd E. Bloom, M. J. Kuhar, L. W. Swanson, C. Owman, M. Tohyama, O. P. Ottersen, J. Storm-Mathisen, R. Quirion, Leszek Kaczmarek, Harold A. Robertson, S. B. Dunnett, 1983

The Primate Nervous System, 1997 This volume is the second in the planned coverage of the neurochemical circuitry of the primate central nervous system While this volume contains only two chapters their topics and the extraordinarily comprehensive coverage with which the authors have dealt with their topics will nevertheless contribute equal amounts of knowledge wisdom and opportunities for future research extensions as have every volume in this unique series As such these chapters extend the goals of this primate series to develop a broad coverage of human and non human primate chemical neuroanatomic details in a volume which makes clear the known and desirable appreciation for differences between and among subsets of primate brains The first chapter covers the primate thalamus with equal emphases on new

world old world pro simian and human anatomic details and their differences The second undertakes a comparably comprehensive examination of one of the most intensively studied regions of the primate brain namely the primate visual cortex While much has been studied both chapters also reveal how much remains for future efforts in these enormously important regions which are the archetypes of primate sub cortical and cortical function **The Primate Nervous System, Part I** ,1997 *The Origins of Grammar* James R. Hurford,2012 The second in James Hurford s acclaimed two volume exploration of the biological evolution of language explores the evolutionary and cultural preconditions and consequences of humanity s great leap into language **Primate Models of Neurological Disorders** Brian S. Meldrum,C. David Marsden,1975 **Primate Communication Systems and the Emergence of Human Language** Laura Jane Beckman Lancaster,1967 The Primate Nervous System ,1998 *Evolution of Nervous Systems* Jon H. Kaas,2007 The Nervous System Ian Darian-Smith,John Mills Brookhart,Vernon B. Mountcastle,Stephen R.. Geiger,1984 **Primate Report** Deutsches Primatenzentrum,1996 **Primate Patterns** Phyllis Dolhinow,1972 **Primate Brain Evolution** International Primatological Society,1982-01-31 Given the past decade s explosion of neurobiological and paleontological data and their increasingly sophisticated analyses interdisciplinary syntheses between these two broad disciplines are of value and interest to many different scientists The collected papers of this volume will appeal to students of primate and hominid evolution neuroscientists sociobiologists and other behaviorists who seek a better understanding of the substrates of primate including human behavior Each species of living primates represents an endpoint in evolution but comparative neurologists can produce approximate evolutionary sequences by careful analyses of representative series Because nervous tissue does not fossilize only a comparison of structures and functions among extant primates can be used to investigate the fine details of primate brain evolution Paleoneurologists who directly examine the fossil record via endocasts or cranial capacities of fossil skulls can best provide information about gross details such as changes in brain size or sulcal patterns and determine when they occurred Physical anthropologists and paleontologists have traditionally relied more on paleoneurology whereas neuroscientists and psychologists have relied more on comparative neurology This division has been a detriment to the advancement of these fields and to the conceptual bases of primate brain evolution Both methods are important and a synthesis is desirable To this end two symposia were held in 1980 one at the meeting of the American Association of Physical Anthropologists in Niagara Falls U S A and one at the precongressional meeting of the International Primatological Society in Torino Italy Evolutionary and Genetic Biology of Primates John Buettner-Janusch,1963 **Comparative and Evolutionary Aspects of the Vertebrate Central Nervous System** J. M. Petras,Charles Robert Noback,1969 **The Nervous System: (2 pts.) Mechanics of breathing** ,1977 *The American Psychiatric Publishing Textbook of Psychopharmacology* Alan F. Schatzberg,Charles B. Nemeroff,2004 Covering both basic science and clinical practice this new edition of the definitive psychopharmacology text has been thoroughly updated and expanded to keep you current with

the explosive growth in this burgeoning field The book contains 62 chapters overall with 24 new chapters and 30 new authors In four major sections the Textbook covers Principles of Psychopharmacology provides the necessary background in neurobiology and pharmacology Classes of Psychiatric Treatment Animal and Human Pharmacology presents information by classes of drugs greatly expands on second edition by focusing whole chapters on single drugs in the antidepressant antipsychotic and bipolar categories Clinical Psychobiology and Psychiatric Syndromes reviews the data on the biological underpinnings of specific disorders for a better understanding of current psychopharmacological approaches Psychopharmacological Treatment provides specific information about drug selection and their prescription Complete with a comprehensive and easy to use index this new edition succeeds the second as the definitive textbook on psychopharmacology
