Grainger & Allison's Diagnostic Radiology: Oncological Imaging Victoria Goh, Andy Adam, 2015-11-24 The 7 chapters in this book have been selected from the contents of the Oncological

Imaging section in Grainger Allison's Diagnostic Radiology 6e These chapters provide a succinct up to date overview of current imaging techniques and their clinical applications in daily practice and it is hoped that with this concise format the user will quickly grasp the fundamentals they need to know Throughout these chapters the relative merits of different imaging investigations are described variations are discussed and recent imaging advances are detailed Please note that the following chapters represent a portion of the oncological imaging aspects in the comprehensive 6th edition of Grainger's Allison's Diagnostic Radiology for example abdominal tumours are considered in section C Abdominal Imaging Textbook of Radiology And Imaging, Vol 2 - E-Book Bharat Aggarwal,2022-06-30 This book is a classic guide for trainees and practitioners with a comprehensive overhaul this book successfully bridges the gap between advancing technology terminology and the emergence of new diseases With its all encompassing approach this book serves as the ultimate resource for radiology professionals eliminating the need for multiple texts on various systems and recent updates Trainees and practitioners alike will find immense value as it caters to both skill enhancement and exam preparation for residents For trainees the book provides essential tools to elevate their expertise as it covers various topics Meanwhile community practitioners will greatly benefit from evidence based guidelines and protocols presented in the book The new edition of Sutton retains the overall format presentation style and comprehensive coverage of the previous editions Significant advances in imaging techniques and newer applications of different modalities have been incorporated in all sections Radiology lexicons and updated classification systems for various diseases have been included There is emphasis on differential diagnosis appropriateness criteria and disease management Salient features have been highlighted as imaging pearls and teaching points New sections for Imaging Physics Principles of Imaging Emergency Radiology Pediatric Radiology and Nuclear Medicine have been added to make the book more comprehensive Crucial topics on patient safety quality assurance and structured reporting have been included to help radiologists become processes driven and ensure better patient care Chapters on Information technology and Artificial intelligence introduce residents to the digital environment that we live in and its impact on day to day practice A section on Interventional Radiology has been included to enable residents to get a deeper understanding of this subspeciality and explore its scope in modern medicine This edition of Sutton is aimed at presenting an exhaustive teaching and reference text for radiologists and other clinical specialists **Principles and Practice of Radiation Therapy** Charles M. Washington,Dennis T. Leaver,2004 The three separate volumes of the first edition each designed to stand alone have been combined into a single volume Several chapters have been consolidated and additional information added specifically in the areas of treatment planning electronic charting CT stimulation dose distribution and education Pedagogical features designed to enhance comprehension and critical thinking are incorporated into each chapter Elements include chapter outlines key terms and a glossary that includes significant terms from both editions Of particular note are the Review Questions and Questions to Ponder at the end of each chapter **PET/PET-CT**

for recommendations from nuclear medical medical and radiological professional societies and explicit not to do recommendations The quality of the included references was appraised using appropriate validated tools In addition a search for new PET planning documents and a brief overview on PET MRI was compiled Results A total of 10 HTAs were included and 234 positive and negative recommendations from professional societies and databases were extracted supplemented by the statements from 23 SR MA Evidence in oncological indications Statements from 5 HTAs recommendations and non recommendations n 188 from professional societies as well as supplementary information from 12 SR MA were taken into account for the update There is relative consensus that there is sufficient evidence for sub indications in 8 indications in favor of PET or PET CT examinations bronchial carcinoma update mainly pre treatment controversial in restaging and response control and in therapy monitoring colon carcinoma malignant lymphoma malignant melanoma update for diagnosis of recurrence also come controversion mamma carcinoma treatment response for diagnosis of recurrence and head neck tumors in 2015 report CUP ThyroidCa update mainly for diagnosis of recurrence and added by update myeloma and neuroendocrine tumors There is relative consensus in 8 indication areas that too little evidence in favor of PET examination individual decisions possible is available bladder carcinoma hepatic cancer cervical carcinoma gastric cancer ovarian and uterus carcinoma prostate cancer as well as paraneoplastic neurological syndrome In further 8 indications there is controversial and inconclusive evidence and recommendations made with reservations anal canal carcinoma brain esp glioma testicular kidney penile carcinoma esophagus cancer except re staging and pancreatic carcinomas as well as bone and soft tissue tumors GIST Evidence in neurological indications Statements from 2 HTAs recommendations and non recommendations n 28 from professional societies as well as additional information from 3 SR MA were taken into account Evidence was identified and presented for two sub indications Alzheimer s dementia dementia and epilepsy There is consensus relative agreement that there is not sufficient evidence in favor of a PET PET CT for either of these two sub indications though professional societies name specific cases of Alzheimer s dementia or specific conditions patient characteristics that speak for or against the PET application and also depend on the respective tracer amyloid vs FDG These recommendations are based on a weak evidence base Inconsistent inconclusive evidence controversial between HTA and GL is given for the evaluation of patients with epilepsy again only in certain cases in specialized epilepsy centres though there is some consensus among the professional societies Evidence in inflammatory indications infections Statements from 3 HTAs recommendations and non recommendations n 18 from professional societies as well as supplementary information from 8 SR MA were considered There is relative consensus of sufficient evidence in favor of PET or PET CT could be identified for infections of the vertebral column spondylodiscitis In further 4 sub indications there is controversial and inconclusive evidence Periprosthetic joint infection osteomyelitis sarcoidosis and fever of unclear origin FUO First insights into the potential application of the hybrid PET MRI indicate that no specific recommendations can currently be made for PET MRI to

be superior to PET CT in routine clinical practice This is mainly due to a lack of evidence With regard to planning of PET or PET CT the update was unable to identify new literature and developments However a Canadian report CADTH 2018 provides continuous data on 6 imaging techniques including also PET CT and can be used as a basis for research policy and planning Furthermore the US research projects at the CER Center for Comparative Effectiveness Research in Cancer Imaging investigating the benefits of PET PET CT want to create the basis for better planning Conclusion and Recommendation Overall the update 2018 resulted in more details and specifications compared to the LBI HTA report 2015 The overall recommendations for indications and also detailed recommendations for sub indications as well as the explicit non recommendations from the LBI HTA report 2015 and this update 2018 can serve as needs based and evidence based decision support for PET PET CT service provision in German and Austrian hospitals *Principles and Practice of PET and PET/CT* Richard L.
