Postembryonic Development in Birds and Mammals Marek Gębczyński, 1985 **Avian Growth and Development** J. Matthias Starck, Robert E. Ricklefs, 1998 This is the first re appraisal in 50 years of concepts of development made in birds This book is a case study in evolutionary diversification of life histories Although birds have a rather uniform body plan and physiology they exhibit marked variation in development type parental care and rate of growth Altricial birds are fully dependent on their parents for warmth and nutrition and begin posthatching life in a more or less embryonic condition At the other extreme such superprecocial species as the megapodes are independent of all parental care from hatching and the neonate able to fly resembles an adult bird This book thus attempts to present an integrative perspective of organism biology ecology and evolution **Development, Maturation, and Senescence of Neuroendocrine Systems** Colin G. Scanes, 2012-12-02 Development Maturation and Senescence of Neuroendocrine Systems A Comparative Approach discusses the various phases of the aging continuum of neuroendocrine systems This book explores the fundamental and physiological component of animals which is an essential contributor to senescence Organized into three parts encompassing 21 chapters this volume starts with a discussion of the concept of neurosecretory neuron that was introduced by Ernst Scharrer in 1928 This book discusses the challenges in the study of the development of the neuroendocrine system in insects with a focus on Lepidoptera Other chapters consider the neuroendocrine mechanisms that control the physiological processes in crustaceans The reader is then introduced to the major neurohemal structures in crustaceans including the sinus gland the pericardial organs and the post commissural organs The final chapter discusses the two brain systems that show impact of endogenous steroids that account for subsets of senescent changes This book is a valuable resource for neurobiologists molecular biologists and immunologists *Animal Metamorphosis* , 2013-01-17 This new volume of Current Topics in Developmental Biology covers recent progresses in our understanding of animal metamorphosis Over a dozen of leading experts reviews studies ranging from morphological molecular to genetic analyses of metamorphosis in a broad spectrum of animals including insects fish Topics include molecular evolution in metamorphosis the synthesis and function of hormones in regulating metamorphic timing and rate regulation and function of nuclear hormone receptors neuroendocrine control of metamorphosis tissue specific metamorphic events such as autophagy and stem cell development and applications of genome wide analysis technologies for studying metamorphosis First comprehensive review of the metamorphosis in diverse animal species by leading experts in the field Covers a broad range of subjects from morphological changes molecular and genetic studies to cutting edge technologies for metamorphic studies from systematic changes to tissue specific events such as autophagy and stem cell development which are areas of enormous interest in contemporary biomedical research Serves as a reference book for undergraduate and graduate students in fields across biology and biomedicine **Zentralblatt für Physiologie** , 1892 **Centralblatt für Physiologie** , 1892 **CSA Neurosciences Abstracts** , 1986 Monthly with annual
