Posthumanity Thinking Philosophically About The Future:

Posthumanity Brian Cooney, 2004-06-10 In *Posthumanity* Brian Cooney examines this philosophically turbulent era in which the products of our latest technology will include a new kind of reality new kinds of minds and new sorts of bodies for those minds Until now major technological innovations have always had an important effect on human history But our newest technology will alter the human animal to such an extent that the next era could end up being posthuman *Posthumanity* introduces key concepts in philosophy in a creative and provocative manner guaranteed to engage the attention of first year students and other newcomers to the study of philosophy Using examples from films television and science fiction Cooney advances a fascinating and original argument about technology while simultaneously acquainting students with the foundations of philosophy

Philosophical Posthumanism Francesca Ferrando, 2019-06-27 The notion of the human is in need of urgent redefinition At a time of radical bio technological developments and in light of the political and environmental imperatives of our age the term posthuman provides an alternative The philosophical landscape which has developed as a response to the crisis of the human includes several movements such as Posthumanism Transhumanism Antihumanism and Object Oriented Ontology This book explains the similarities and differences between these currents and offers a detailed examination of a number of topics that fall under the posthuman umbrella including the anthropocene artificial intelligence and the deconstruction of the human Francesca Ferrando affords particular focus to Philosophical Posthumanism defined as a philosophy of mediation which addresses the meaning of humanity not in separation but in relation to technology and ecology The posthuman shift thus emerges in the global call for social change responsible science and multispecies coexistence

Immortal Passage Asher Seidel, 2010-10-11 *Immortal Passage Philosophical Speculations on Posthuman Evolution* is Asher Seidel's speculative account of posthuman evolution Seidel begins with the transitional period in which humans begin to live for significantly extended periods then moves to the closer future in which having transitioned the now posthumans enjoy enhanced cognitive and creative powers Finally Seidel enters the distant future where our descendants might possess abilities beyond the limits of what is presently conceivable Seidel's speculations engage various philosophical problems Seidel seeks an ethical theory that co develops with a deeper scientific understanding of ourselves He also examines the metaphysical and epistemological presuppositions of his recommendation for human to posthuman transitioning including mind body dualism vigorous enough to allow for full bodied consciousness but insufficient for freewill perceptual direct realism and self identity As the speculations reach further into the future various socio political questions regarding the difficulties of transitioning are explored Speculated possibilities of pain free living cooperative relationships nonbiological selfhood and radically enhanced cognitive abilities are examined in depth in this mind bending ride into the future of humankind

Parallels and Responses to Curricular Innovation Brad Petitfils, 2014-10-24 This volume explores two radical shifts in history and subsequent responses in curricular spaces the move from oral to print culture

during the transition between the 15th and 16th centuries and the rise of the Jesuits and the move from print to digital culture during the transition between the 20th and 21st centuries and the rise of what the philosopher Jean Baudrillard called hyperreality The curricular innovation that accompanied the first shift is considered through the rise of the Society of Jesus the Jesuits These men created the first global network of education and developed a humanistic curriculum designed to help students navigate a complicated era of the known human centered and unknown God centered universe The curricular innovation that is proposed for the current shift is guided by the question What should be the role of undergraduate education become in the 21st century Today the tension between the known and unknown universe is concentrated on the interrelationships between our embodied spaces and our digitally mediated ones As a result today s undergraduate students should be challenged to understand how in the objectively focused commodified STEM centric landscape of higher education the human subject is decentered by the forces of hyperreality and in turn how the human subject might be recentered to balance our humanness with the new realities of digital living Therein one finds the possibility of posthumanistic education

Science and Technology in 20th-Century American Life Christopher Cuno, 2007-08-30 The twentieth century witnessed the greatest changes in technology and science that humans have ever witnessed These occurred rapidly and affected such a broad range of people Scientists inventors and engineers built upon the great inventions of the 19th century to expand the reach of modern technology for a citizen in 1900 communication transportation and agricultural was still primarily local activities by 2000 an American citizen was part of an interconnected global community These developments in science and technology were also important in the social and cultural changes of the period The Great Depression the World Wars and Cold War the civil rights and women s rights movements all were greatly impacted by the rapid scientific and technological advancements in the universities and industry

Philosophy of Posthuman Art Stefan Lorenz Sorgner, 2022-06-13 Aesthetic reflections by various members of the Frankfurt school have dominated the art world for many decades Sorgner shows that they introduced a paternalistic logic in the field of aesthetics while attempting to overcome paternalism His art philosophical alternative reveals the option of creating non totalitarian total works of art The wide spectrum of posthuman artworks reveals the immense diversity of nontotalitarian total works of art A deeply considered survey of the posthuman future of art Sorgner s philosophy of posthumanism provides a path away from the dominant 20th century aesthetics that still inform our conception of art today Through the innovative concept of the twist Sorgner s encyclopedic text frames posthumanism as the foundation of an anti totalitarian future of art Eduardo Kac *Philosophy of Posthuman Art* impressively examines the aesthetics of the monstrous of hybridity of smoothness and of the amorphous to name a few It is an articulate and informed analysis not only of particular artworks but also their philosophical underpinnings of Critical Posthumanism Transhumanism and Metahumanism It not only includes examples of bioart body art performance art and cryptoart but also techno digital and cyborg music It is a time when we transition from the ontology of Being to the ontology of Becoming We

are now in a liminal age of the hybrid and the chimera And as Stefan Lorenz Sorgner reminds us with a twist we have always been cyborgs Stelarc **Playing the Universe** David G. Human Rights in a Posthuman World Upendra Baxi,2007 This important new work reflects on the contemporary human condition in a posthuman and machinistic world almost overwhelmed by security concerns terror and its politics and technoscience Exploring the role of human rights and development in such a world Baxi contends that any serious analysis of human rights theory and practice must confront two critical realities Firstly that the new world economic and military orders

along with the continuing wars of and on terror adversely impact global social and human development policies and programmes Secondly that emergent technologies especially artificial intelligence biotechnologies and nano technologies generating the discourse of the posthuman have serious implications for human rights The book presents a critique of the approaches towards a theory of human rights proposed by Amartya Sen and his emphasis on the ethical as opposed to the juridical nature of such rights It proceeds to examine the complexities and contradictions of the ideology of development and asks why there has been so little progress with regard to the right to development It explores how in the current world scenario the emancipatory potential of human rights may be carried forward in theoretical work and through activism

Sustainable Development and Global Ethics Carl-Henric Grenholm, Normunds Kamergrauzis, 2007 *Globalization and the Posthuman* William S. Haney, 2009 *Globalization and the Posthuman* argues that by globalizing posthumanism through biotechnology particularly through the invasive interface of humans and machines we may well interfere with and even undermine the innate quality of human psycho physiology and the experience of the internal observer the non socially constructed self or pure consciousness Furthermore many features of globalization in and of itself such as the fall of public man the exterritorialization of capital the loss of an impersonal public world to localized communities based on emotively shared interests combined with the posthuman expansion of biotechnology will diminish our natural capacity to experience the self as knower and lead to an increase in global crime sickness accident rates and overall lack of harmony The experience of the self comprises the unsayable secret of modern and postmodern literature and art a secret that may soon become inaccessible if the world continues down the road of globalized infomania The analysis of the consequences of globalization and the posthuman in this book is unique in that it will be the first to examine the interrelation between globalization posthumanism and pure consciousness Posthumanists define consciousness in a way that promotes the globalization of biotechnology without regard for its potential risks This book explores the implications of the globalization of the posthuman model of consciousness On the one hand cognitive scientists tend to equate consciousness with subjectivity which they associate with the thinking mind as an extension of the body nature and culture Eastern philosophy on the other hand distinguishes mind from consciousness with mind defined as the content of consciousness Bionic technology will have the effect of raising human metabolism and preventing the mind from settling down to the state of least excitation of consciousness This book suggests that while conscious content is an indispensable aspect of both the human and posthuman condition the thoughts memories feelings and perceptions of this content do not encompass a vital aspect of human nature attested to not only by the first person experience of many millions of people around the world but also by the records of both classical and modern contemplative traditions
