

Uses of Coal

1. **As a primary fuel:** Coal is used to produce steam through heat and combustion, which is again used for running turbines to generate electricity in power plants.
2. **As a secondary fuel:** The product of burning coal in the absence of air is of metallurgical importance. The byproducts are useful in making plastics, tar and synthetic fibers and also used making steel in industries.

Pulverized Coal

Pulverized coal generally refers to coal in powdered form obtained by crushing, grinding or pulverizing coal. As the surface area of pulverized coal is large, the volatile matter present in it comes quickly in contact with air and is released, enabling the combustion of fixed carbon. This increases the calorific value of the coal and enhances its quality.
