Shapes Of Forms From Gestalt Psychology And Phenomenology To Ontology And Mathematics:

Shapes of Forms L. Albertazzi, 2013-03-09 impossible triangle after apprehension of the perceptively given mode of being of that object the visual system assumes that all three sides touch on all three sides whereas this happens on only one side In fact the sides touch only optically because they are separate in depth In Meinong's words Penrose's triangle has been inserted in an objective or in what we would today call a cognitive schema Re-examination of the Graz school's theory as said sheds light on several problems concerning the theory of perception and as Luccio points out in his contribution to this book it helps to eliminate a number of over-simplistic commonplaces such as the identification of the cognitivist notion of top-down with Wertheimer's von oben unten and of bottom-up with his von unten nach oben In fact neither Hochberg's and Gregory's concept-driven perception nor Gibson's data-driven perception coincide with the original conception of the Gestalt

Unfolding Perceptual Continua Liliana Albertazzi, 2002 The book analyses the differences between the mathematical interpretation and the phenomenological intuition of the continuum The basic idea is that the continuity of the experience of space and time originates in phenomenic movement The problem of consciousness and of the spaces of representation is related to the primary processes of perception Conceived as an interplay between cognitive science linguistics and philosophy the book presents a conceptual framework based on a dynamic and experimental approach to the problem of the continuum Besides presenting the primitives of a theory of cognitive space and time it presents a theory of the observer analyzing the relationship among perspective points of view and unity of consciousness The book's chapters deal with the dynamic elaboration and recognition of forms from the lower to the higher processes in the various perceptual fields Experimental analysis from visual auditory and tactile perception outline the basic structures of intentionality and its counterpart in language and gesture Series B
