Shaping Technology / Building Society Wiebe E. Bijker, John Law, 1994-09-29 Building on the influential book *The Social Construction of Technological Systems* this volume carries forward the project of creating a theory of technological development and implementation that is strongly grounded in both sociology and history Technology is everywhere yet a theory of technology and its social dimension remains to be fully developed Building on the influential book *The Social Construction of Technological Systems* this volume carries forward the project of creating a theory of technological development and implementation that is strongly grounded in both sociology and history The 12 essays address the central question of how technologies become stabilized how they attain a final form and use that is generally accepted The essays are tied together by a general introduction part introductions and a theoretical conclusion The first part of the book examines and criticizes the idea that technologies have common life cycles three case studies cover the history of a successful but never produced British jet fighter the manipulation of patents by a French Renault two studies argue for a strong sociotechnology in which artifact and social context are viewed as a single seamless web while the third looks at the ways in which a social program is a technology

Producing Power Sonja D. Schmid, 2015-02-06 An examination of how the technical choices social hierarchies economic structures and political dynamics shaped the Soviet nuclear industry leading up to Chernobyl The Chernobyl disaster has been variously ascribed to human error reactor design flaws and industry mismanagement Six former Chernobyl employees were convicted of criminal negligence they defended themselves by pointing to reactor design issues Other observers blamed the Soviet style of ideologically driven economic and industrial management In *Producing Power* Sonja Schmid draws on interviews with veterans of the Soviet nuclear industry and extensive research in Russian archives as she examines these alternate accounts Rather than pursue one definitive explanation she investigates how each of these narratives makes sense in its own way and demonstrates that each implies adherence to a particular set of ideas about high risk technologies human machine interactions organizational methods for ensuring safety and productivity and even about the legitimacy of the Soviet state She also shows how these attitudes shaped and were shaped by the Soviet nuclear industry from its very beginnings Schmid explains that Soviet experts established nuclear power as a driving force of social not just technical progress She examines the Soviet nuclear industry's dual origins in weapons and electrification programs and she traces the emergence of nuclear power experts as a professional community Schmid also fundamentally reassesses the design choices for nuclear power reactors in the shadow of the Cold War's arms race Schmid's account helps us understand how and why a complex sociotechnical system broke down Chernobyl while unique and specific to the Soviet experience can also provide valuable lessons for contemporary nuclear projects

Developer's Dilemma Casey O'Donnell, 2014-11-21 Step inside the shoes of video game creators in this fascinating look at game development and how it can inform our understanding of work Rank and file game developers bring videogames from concept to product and yet

their work is almost invisible hidden behind the famous names of publishers executives or console manufacturers In this book Casey O Donnell examines the creative collaborative practice of typical game developers His investigation of why game developers work the way they do sheds light on our understanding of work the organization of work and the market forces that shape and are shaped by media industries O Donnell shows that the ability to play with the underlying systems technical conceptual and social is at the core of creative and collaborative practice which is central to the New Economy When access to underlying systems is undermined so too is creative collaborative process Drawing on extensive fieldwork in game studios in the United States and India O Donnell stakes out new territory empirically conceptually and methodologically Mimicking the structure of videogames the book is divided into worlds within which are levels and each world ends with a boss fight a rant about lessons learned and tools mastered O Donnell describes the process of videogame development from pre production through production considering such aspects as experimental systems socially mandatory overtime and the perpetual startup machine that exhausts young initially enthusiastic workers He links work practice to broader systems of publishing manufacturing and distribution introduces the concept of a privileged actor intra internetwork and describes patent and copyright enforcement by industry and the state

structures often become mired in debate and delay Despite the fact that cities are considered to be dynamic and flexible spaces never finished but always under construction it is very difficult to change existing urban structures they become fixed obdurate securely anchored in their own histories as well as in the histories of their surroundings In *Unbuilding Cities* Anique Hommels looks at the tension between the malleability of urban space and its obduracy focusing on sites and structures that have been subjected to unbuilding redesign or reconfiguration She brings the concepts of science and technology studies STS to bear on the study of cities Viewing the city as a large sociotechnological artifact she demonstrates the usefulness of STS tools that were developed to analyze other technological artifacts and explores in detail the role of obduracy in sociotechnical change Her analysis distinguishes three concepts of obduracy interactionist in which actors with diverging views are constrained by fixed ways of thinking and interacting relational in which change is difficult because of technology s embeddedness in sociotechnical networks and enduring in which persistent traditions influence the development of technology over time Hommels examines the tensions between obduracy and change in three urban redesign projects in the Netherlands a renovated city center that fell into drabness and disrepair a highway system that runs through a densely populated urban area and a high rise housing project designed according to modernist precepts and built for middle class families that became a haven for unemployment and crime *Unbuilding Cities* contributes to a productive fusion of STS and urban studies

Managing Technology in Society Arie Rip, Thomas J. Misa, J. W. Schot, 1995 A fateful conceptual gap separates the policy makers and managers charged with promoting technology and the risk and technology assessors responsible for controlling it This hampers the effective use of many new technologies and prevents the development of others The strategy of constructive technology assessment CTA addresses this gap through facilitating societal learning processes and proposing a shared responsibility for the promotion and control of new technologies Combining analysis of both cases and concepts *Managing Technology in Society* confronts the underdevelopment of innovative potential for achieving goals of wealth sustainability and safety Factors that block change as well as conditions for successful learning are identified in a wide ranging selection of cases that encompass biotechnology clean technologies information and medical technologies The contributors build on the convergence of recent theories on technical change within economics sociology and the history of technology to offer suggestions for CTA action and so create a new paradigm of managing technology in society
