Position Sensitive Detection Of Thermal Neutrons:

Position-sensitive Detection of Thermal Neutrons Pierre Convert, J. Bruce Forsyth, 1983 *Phase I - Final Report*, 2001 A position sensitive neutron detector was designed and fabricated with bundles of individual detector elements with diameters of 120 mm These neutron scintillating fibers were coupled with optoelectronic arrays to produce a Fiber Detector A fiber position sensitive detector was completed and tested with scattered and thermal neutrons Deployment of improved 2D PSDs with high signal to noise ratios at lower costs per area was the overall objective of the project **Energy Research**

Abstracts, 1992 **Neutrons in Biology** Benno P. Schoenborn, Robert B. Knott, 2012-12-06 This compendium presents some of the major applications of neutron scattering techniques to problems in biology It is a record of the papers presented at the Neutrons in Biology Conference the third in an occasional series held to highlight progress in the field and to provide a focus for future direction The strength of the neutron scattering technique remains principally in the manipulation of scattering density through hydrogen and deuterium atoms The development of advanced detectors innovative instrument and beamline components and sophisticated data acquisition systems through the 1970s and early 1980s provided a sound foundation for the technique With continued development some of the exotic and expensive equipment has become affordable by the medium sized facilities thereby broadening the user base considerably Despite problems with the major neutron sources in the late 1980s and early 1990s some spectacular results have been achieved Whilst the high and medium flux beam reactors will continue to make a major impact in the field the results from the first experiments and the planned developments on spallation neutron sources clearly indicate that the technique has enormous potential **International**

Tables for Crystallography, Volume C A.J.C. Wilson, E. Prince, 1999-06-30 International Tables for Crystallography are no longer available for purchase from Springer For further information please contact Wiley Inc The purpose of Volume C is to provide the mathematical physical and chemical information needed for experimental studies in structural crystallography This new edition features two completely new chapters on reflectometry and neutron topography More than half of the text has been revised and updated and there are extensive updates and corrections to tabular material Volume C covers all aspects of experimental techniques using all three principal radiation types from the selection and mounting of crystals and production of radiation through data collection and analysis to interpretation of results Audience The volume is an essential source of information for all workers using crystallographic techniques in physics chemistry metallurgy earth sciences and molecular biology **INIS Atomindex**, 1987 **International Tables for Crystallography, Volume F** Eddy

Arnold, Daniel M. Himmel, Michael G. Rossmann, 2012-03-05 International Tables for Crystallography Volume F is an expert guide to macromolecular crystallography for the structural biologist It was commissioned by the International Union of Crystallography in recognition of the extraordinary contributions that knowledge of macromolecular structure has made and will make to the analysis of biological systems from enzyme catalysis to the workings of a whole cell The volume covers all

stages of a crystallographic analysis from the preparation of recombinant proteins through crystallization diffraction data collection phase determination structure validation and structure analysis Although the volume is written for experienced scientists it is recognized that the reader is more likely to be a biologist interested in structure than a classical crystallographer interested in biology Thus there are chapters on the fundamentals history and current perspectives of macromolecular crystallography as well as on useful programs and databases such as the Protein Data Bank Each chapter is written by one or more internationally recognized experts This second edition features 19 new articles and many articles from the first edition have been revised The new articles cover topics such as standard definitions for quality indicators expression of membrane proteins protein engineering high throughput crystallography radiation damage merohedral twinning low resolution ab initio phasing robotic crystal loading whole cell X ray diffraction imaging and halogen interactions in biological crystal structures There are also new articles on relevant software including software for electron microscopy These enhancements will ensure that Volume F continues to be a key reference for macromolecular crystallographers and structural biologists More information on the series can be found at <http://it.iucr.org> *Nuclear Science Abstracts*, 1973

James, 2002 We are developing 10 mm thick CZT detectors with 3 D readout for 100 keV to 1.5 MeV gamma rays Multiple site gamma ray interactions are fully measured i.e. the energy and 3 D position of each site are determined Spatial resolution is 1 mm FWHM Anode pixel readout with 1 mm pitch is used for x and y positions and charge drift times for z positions Drift time measurements are triggered by the cathode signal and end when each interaction site's charge cloud reaches an anode pixel Post event processing corrects for signal loss due to

charge trapping and accurately determines gamma ray energies with a goal of 1% energy resolution at 662 keV Compton kinematic analysis can identify the initial interaction site in most cases as well as constrain the incident gamma ray direction Tests were made with a prototype detector measuring 10 x 10 x 10 mm³ and operated at 1000 V bias The measured drift time resolution of 25 nsec FWHM at 662 keV and 60 nsec at 122 keV corresponds to z position resolution of 0.25 and 0.60 mm FWHM respectively The technique is described and results of modeling and tests are presented **Risø Report** ,1970
