Field-Assisted Sintering Eugene A. Olevsky, Dina V. Dudina, 2018-08-09 This book represents the first ever scientific monograph including an in depth analysis of all major field assisted sintering techniques Until now the electromagnetic field assisted technologies of materials processing were lacking a systematic and generalized description in one fundamental publication this work promotes the development of generalized concepts and of comparative analyses in this emerging area of materials fabrication This book describes modern technologies for the powder processing based fabrication of advanced materials New approaches for the development of well tailored and stable structures are thoroughly discussed Since the potential of traditional thermo mechanical methods of material treatment is limited due to inadequate control during processing the book addresses ways to more accurately control the resultant material s structure and properties by an assisting application of electro magnetic fields The book describes resistance sintering high voltage consolidation sintering by low voltage electric pulses including spark plasma sintering flash sintering microwave sintering induction heating sintering magnetic pulse compaction and other field assisted sintering techniques Includes an in depth analysis of all major field assisted sintering techniques Explains new techniques and approaches for material treatment Provides detailed descriptions of spark plasma sintering microwave sintering high voltage consolidation magnetic pulse compaction and various other approaches when field assisted treatment is applied

Sintering Techniques of Materials Arunachalam Lakshmanan, 2015-04-01 The book covers new sintering techniques on ceramic materials metals and composites as well as reprocessed PTFE The book covers theoretical as well as experimental aspects on Spark Plasma Sintered SPS Porous copper development of cutting blades with high hardness and resistance to cracking and wear increased microhardness of austenitic steel TiB₂ composites obtained with high pressure high temperature sintering Al₂O₃ porous body with cotton as the template and excellent thermal insulation with direct application for refractories as well as Metal matrix composites added nanostructured tantalum carbide and an overview of different sintering techniques used in powder metallurgy Finally recycling of PTFE scrap materials using ram extrusion and compression molding is described
