Remote Sensing Of Atmosphere And Ocean From Space Models Instruments And Techniques:

Remote Sensing of Atmosphere and Ocean from Space: Models, Instruments and Techniques Frank S.

Marzano, Guido Visconti, 2006-04-11 This book is a collection of the lectures held at the International Summer School ISSAOS 2000 in L'Aquila Italy given by invited lecturers coming from both Europe and the USA. The goal of the book is to provide a broad panorama of spaceborne remote sensing techniques at both microwave and visible infrared bands and by both active and passive sensors for the retrieval of atmospheric and oceanic parameters. A significant emphasis is given to the physical modeling background, instrument potential and limitations, inversion methods and applications. Topics on international remote sensing programs and assimilation techniques into numerical weather forecast models are also touched. The main purpose of the book is to offer to young scientists Ph.D. or equivalent students and to all who would like to have a broad spectrum understanding of spaceborne remote sensing capabilities. Introductory material to each remote sensing topic written by the most qualified experts in the field.

Introduction to Geophysical Fluid Dynamics Benoit Cushman-Roisin, Jean-Marie Beckers, 2011-08-26 Introduction to Geophysical Fluid Dynamics provides an introductory level exploration of geophysical fluid dynamics (GFD), the principles governing air and water flows on large terrestrial scales. Physical principles are illustrated with the aid of the simplest existing models and the computer methods are shown in juxtaposition with the equations to which they apply. It explores contemporary topics of climate dynamics and equatorial dynamics including the Greenhouse Effect, global warming, and the El Niño Southern Oscillation. Combines both physical and numerical aspects of geophysical fluid dynamics into a single affordable volume. Explores contemporary topics such as the Greenhouse Effect, global warming, and the El Niño Southern Oscillation. Biographical and historical notes at the ends of chapters trace the intellectual development of the field. Recipient of the 2010 Wernaers Prize awarded each year by the National Fund for Scientific Research of Belgium (FNR/FNRS).

Carbon Inventory Methods N.H. Ravindranath, Madelene Ostwald, 2007-12-03 Carbon Inventory Methods Handbook fills the need for a handbook that provides guidelines and methods required for carbon inventory. It provides detailed step-by-step information on sampling procedures, field and laboratory measurements, application of remote sensing and GIS techniques, modeling and calculation procedures, along with sources of data for carbon inventory. The book is driven by a growing need for carbon inventory for land use sectors such as forests.

Studies Relevant to NASA's Plankton, Aerosol, Cloud, Ocean Ecosystems (PACE) Mission David Antoine, Oleg

Dubovik, 2020-03-04 Earth's atmosphere and oceans play individual and interconnected roles in regulating climate and the hydrological system supporting organisms and ecosystems and contributing to the well-being of human communities and economies. Recognizing the importance of these two geophysical fluids, NASA designed the Plankton, Aerosol, Cloud, and ocean

Ecosystems PACE mission to bring cutting edge technology to space borne measurements of the atmosphere and ocean PACE will carry the Ocean Color Instrument OCI a radiometer with hyperspectral capability from the ultraviolet through the near infrared plus eight discrete shortwave infrared bands Thus OCI will measure the broadest solar spectrum of any NASA instrument to date PACE's second instrument will be a Multi Angle Polarimeter MAP MAP will be NASA's first imaging polarimeter on board a comprehensive Earth science mission These instruments bring new capability to the science community but also new challenges Fundamentals such as basic radiative transfer models require review enhancements and benchmarking in order to meet the needs of the atmosphere-ocean communities in the PACE era Both OCI and MAP will bring opportunities to continue heritage climate data records of aerosols and clouds and to advance characterization of these atmospheric constituents with new macrophysical and microphysical parameters The ability to better characterize atmospheric constituents is a necessity to better separate ocean and atmosphere signals in order to fully realize the potential of PACE measurements for oceanic observations Atmospheric correction in the PACE era must address the expanded wavelength range and resolution of OCI images requiring new approaches that go beyond heritage algorithms This Research Topic encompasses fundamental radiative transfer studies with application to the atmosphere-ocean or coupled atmosphere-ocean system It includes remote sensing of aerosols clouds and trace gases over ocean or over land but with particular focus on algorithms that take advantage of OCI's new capabilities or multi angle polarimetry The Research Topic embraces studies of atmospheric correction over ocean including addressing issues of aerosols cloud masking foam bubbles ice etc as well as ocean bio-optics and biogeochemical studies taking advantage of the PACE and polarization spectral capabilities
