Shape Interrogation For Computer Aided Design And Manufacturing:

Shape Interrogation for Computer Aided Design and Manufacturing Nicholas M. Patrikalakis, Takashi Maekawa, 2009-11-27 Shape interrogation is the process of extraction of information from a geometric model. It is a fundamental component of Computer Aided Design and Manufacturing CAD/CAM systems. The authors focus on shape interrogation of geometric models bounded by free form surfaces. Free form surfaces, also called sculptured surfaces, are widely used in the bodies of ships, automobiles, and aircraft, which have both functionality and attractive shape requirements. Many electronic devices as well as consumer products are designed with aesthetic shapes which involve free form surfaces. This book provides the mathematical fundamentals as well as algorithms for various shape interrogation methods, including nonlinear polynomial solvers, intersection problems, differential geometry of intersection curves, distance functions, curve and surface interrogation, umbilics, and lines of curvature, geodesics, and offset curves and surfaces. This book will be of interest both to graduate students and professionals. *Geometric Modelling, Numerical Simulation, and Optimization*: Geir Hasle, Knut-Andreas Lie, Ewald Quak, 2007-06-10 This edited volume addresses the importance of mathematics for industry and society by presenting highlights from contract research at the Department of Applied Mathematics at SINTEF, the largest independent research organization in Scandinavia. Examples range from computer aided geometric design via general purpose computing on graphics cards to reservoir simulation for enhanced oil recovery. Contributions are written in a tutorial style. **Computational Science - ICCS 2003. Part 1.** Peter Sloot, 2003-05-22 The four volume set LNCS 2657, LNCS 2658, LNCS 2659, and LNCS 2660 constitutes the refereed proceedings of the Third International Conference on Computational Science, ICCS 2003, held concurrently in Melbourne, Australia, and in St. Petersburg, Russia, in June 2003. The four volumes present more than 460 reviewed contributed and invited papers and span the whole range of computational science, from foundational issues in computer science and algorithmic mathematics to advanced applications in virtually all application fields, making use of computational techniques. These proceedings give a unique account of recent results in the field.

Advances in Swarm and Computational Intelligence Ying Tan, Yuhui Shi, Fernando Buarque, Alexander Gelbukh, Swagatam Das, Andries Engelbrecht, 2015-06-01 This book and its companion volumes LNCS volumes 9140, 9141, and 9142 constitute the proceedings of the 6th International Conference on Swarm Intelligence, ICSI 2015, held in conjunction with the Second BRICS Congress on Computational Intelligence, CCI 2015, held in Beijing, China, in June 2015. The 161 revised full papers presented were carefully reviewed and selected from 294 submissions. The papers are organized in 28 cohesive sections covering all major topics of swarm intelligence and computational intelligence research and development, such as novel swarm based optimization algorithms and applications, particle swarm optimization, ant colony optimization, artificial bee colony algorithms, evolutionary and genetic algorithms, differential evolution, brain storm optimization algorithm, biogeography based optimization, cuckoo search, hybrid methods, multi objective optimization, multi agent systems, and swarm
