Shape Of Actions What Humans And Machines Can Do:

The Shape of Actions Harry Collins, Martin Kusch, 1999-01-05 What can humans do What can machines do How do humans delegate actions to machines In this book Harry Collins and Martin Kusch combine insights from sociology and philosophy to provide a novel answer to these increasingly important questions The authors begin by distinguishing between two basic types of intentional behavior which they call polymorphic actions and mimeomorphic actions Polymorphic actions such as writing a love letter are ones that community members expect to vary with social context Mimeomorphic actions such as swinging a golf club do not vary Although machines cannot act they can mimic mimeomorphic actions Mimeomorphic actions are thus the crucial link between what humans can do and what machines can do Following a presentation of their detailed categorization of actions the authors apply their approach to a broad range of human machine interactions and to learning Key examples include bicycle riding and the many varieties of writing machines They also show how their theory can be used to explain the operation of organizations such as restaurants and armies Finally they look at a historical case the technological development of the air pump applying their categorization of actions to the processes of mechanization and automation Automation they argue can occur only where what we want to bring about can be brought about through mimeomorphic action

The Shape of Future Technology Peter Brödnér, 2012-12-06 Mike Cooley One of the most remarkable features of modern industrial society is the gap between that which technology could provide for society its potential and that which it actually does provide for society its reality We have for example complex control systems which can guide a missile to another continent with extraordinary accuracy yet the blind and the disabled have to stagger around our cities in very much the same way as they did in mediaeval times There are advanced communication systems enabling

messages to be sent around the world in a fraction of a second but it now takes longer to send an ordinary letter from Washington to New York than it did in the days of the stage coach Such a growing chasm between potential and reality is giving rise to a thorough questioning of many of the orthodoxies in these areas and the priorities on which they are based Similar contradictions even if at this stage less obvious and dramatic abound in the field of manufacturing technology There we find technologies which have the potential of liberating human beings from soul destroying routine backbreaking tasks and leave them free to engage in more creative work but which in reality often end up reducing the human being to a mere machine appendage acted upon by the technology and becoming a passive pathetic element in the productive system rather than a creative dynamic human being

Local Applications of the Ecological Approach To Human-Machine Systems Peter A. Hancock, John M. Flach, Jeff Caird, Kim J. Vicente, 2018-05-02 There is a growing consensus in the human factors ergonomics community that human factors research has had little impact on significant applied problems Some have suggested that the problem lies in the fact that much HF E research has been based on the wrong type of psychology an information processing view of psychology that is reductionistic and context free Ecological psychology offers a viable alternative presenting a richer view of human behavior that is holistic and contextualized The papers presented in these two volumes show the conceptual impact that ecological psychology can have on HF E as well as presenting a number of specific examples illustrating the ecological approach to human machine systems It is the first collection of papers that explicitly draws a connection between these two fields While work in this area is only just beginning the evidence available suggests that taking an ecological approach to human factors ergonomics helps bridge the existing gap between basic research and applied problems
