

# Parts of a PLANT

Vedantu

## LEAF

A leaf (plural leaves) is the principal lateral appendage of the vascular plant stem, (II) usually borne above ground and specialized for photosynthesis.

## FLOWER

A flower, sometimes known as a bloom or blossom, is the reproductive structure found in flowering plants.

## FRUIT

A fruit is the seed-bearing structure in flowering plants (also known as angiosperms) formed from the ovary after flowering.

## STEM

Stem is a stalk that supports some other structure.

## ROOT

In vascular plants, the roots are the organs of a plant that are modified to provide anchorage for the plant and take in water and nutrients into the plant body, which allows plants to grow taller and faster.

## **Shedding Of Plant Parts:**

*Shedding of Plants Parts* T.T. Kozlowski, 2012-12-02 *Shedding of Plant Parts* focuses on the anatomical physiological and ecological features of shedding of vegetative and reproductive parts of plants. This book encompasses both natural and induced shedding. Organized into 12 chapters, this book first outlines the extent of shedding of plant cells, tissues, and organs and summarizes the biological and economic implications of such shedding. Separate chapters follow that discuss anatomical and histochemical changes in leaf abscission, the physiological ecology and internal regulation of abscission, and the shedding of shoots, branches, bark, roots, pollen, seeds, and reproductive structures of forest trees. This book also explains the anatomical changes in abscission of reproductive structures, chemical thinning of flowers and fruits, and chemical control of fruit abscission. This book will be valuable to plant anatomists, pathologists, and physiologists and to agronomists, arborists, biochemists, ecologists, entomologists, foresters, horticulturists, landscape architects, meteorologists, and soil scientists.

**Shedding of Plant Parts** Kozlowski T T [Ed.], 1971      Research Methods in Plant Sciences: Allelopathy Vol. 5 (Plant Physiology) S.S. Narwal, 2007-07-01 Allelopathy is a new field of science as the term Allelopathy was coined by Prof Hans Molisch, a German Plant Physiologist, in 1937. However, no standard methods are being used by various workers due to lack of a compendium on the techniques; hence the results obtained are not easily comparable with each other's. Till now, a lot of allelopathy research has been done in various fields of Agricultural and Plant Sciences. However, there is no compilation of various Research Methods used. Every scientist is conducting research in his own way. It is causing a lot of problems to researchers working in underdeveloped Third World Countries in small towns without library facilities. Therefore, to make available the standard methods for conducting allelopathy research independently, this multi-volume book has been planned. Since allelopathy is a multi-disciplinary area of research, hence volumes have been planned for each discipline. Prof S S Narwal has planned this multi-volume Book *Research Methods in Plant Sciences: Allelopathy*. Three volumes: Volume 1 Soil Analysis, Volume 2 Plant Protection, and Volume 3 Plant Pathogens of this Book were released during the IV International Allelopathy Conference, August 23-25, 2004, at Haryana Agricultural University, Hisar-125004, India. Volumes 4 Plant Analysis and Volume 5 Plant Physiology will be released in November 2006. Three volumes: Volume 6 Cell Diagnostics, Volume 7 Chemistry Methods, and Volume 8 Weed Studies are under preparation. This volume of 28 Chapters is divided into 7 Sections. Section I Seed Physiology includes 5 chapters describing the structure of seed, optimum conditions for seed germination, physiological and biochemical changes at cellular level. Section II Growth and Development describes leaf area, growth indices, senescence, and abscission. Allelochemicals present in soil or plant can create chemical stress which may change the plant water status, plasma membrane properties, chlorophyll stability, and waxes present on the organ surface. Methods to determine all these parameters are described in next 4 chapters in Section III Stress Physiology. These sites can be explored by estimating chlorophyll content, chlorophyll fluorescence, photosystems I and II activity, carbon dioxide exchange rate, activity of CO<sub>2</sub>

fixing enzymes intermediate metabolite level photosynthate partitioning respiration and finally the crop growth dynamics Methods to determine extent of all these sites are explained in 7 chapters in Section IV Gas Exchange Processes The main cause of changed physiological process is at the gene level for which estimation of nucleic acids is very critical It is briefly explained in section V Biochemical Estimation Section VI Microtomy and Histochemistry has 7 chapters Basic procedure to process the test plant material for microtomy use of light and electron microscopy to study cellular changes measurement of cellular dimensions stomatal index and frequency pollen viability and in vivo pollen germination and histochemical localization of important enzymes and metabolites are the core topics Currently tissue cultures are commonly used to study the precise effect of allelochemicals on callus growth and differentiation To achieve these objectives techniques of tissue cultures is described under section VI Tissue Culture

*Physiology of Woody Plants* Theodore T. Kozlowski, Stephen G. Pallardy, 1996-10-18 This completely revised classic volume is an up to date synthesis of the intensive research devoted to woody plants Intended primarily as a text for students and a reference for researchers this interdisciplinary book should be useful to a broad range of scientists from agroforesters agronomists and arborists to plant pathologists ecophysiologicalists and soil scientists Anyone interested in plant physiology will find this text invaluable Includes supplementary chapter summaries and lists of general references Provides a solid foundation of reference information Thoroughly updated classic text reference
