High-throughput Image Reconstruction and Analysis A. Ravishankar Rao, Guillermo A. Cecchi, 2009 This innovative volume surveys the latest image acquisition advances in serial block face techniques in scanning electron microscopy knife edge scanning microscopy and 4D imaging of multi component biological systems The book introduces parallel processing for biological applications You learn advanced parallelization techniques for decomposing a problem domain and mapping it onto a parallel processing architecture using the message passing interface MPI and OpenMP Case studies show how these

techniques have been successfully used in simulation tasks data mining and graphical visualization of biological datasets You also find coverage of methods for developing scalable biological image databases and for facilitating greater interactive visualization of large image sets

Stochastic Computing: Techniques and Applications Warren J. Gross, Vincent C. Gaudet, 2019-02-18 This book covers the history and recent developments of stochastic computing Stochastic computing SC was first introduced in the 1960s for logic circuit design but its origin can be traced back to von Neumann's work on probabilistic logic In SC real numbers are encoded by random binary bit streams and information is carried on the statistics of the binary streams SC offers advantages such as hardware simplicity and fault tolerance Its promise in data processing has been shown in applications including neural computation decoding of error correcting codes image processing spectral transforms and reliability analysis There are three main parts to this book The first part comprising Chapters 1 and 2 provides a history of the technical developments in stochastic computing and a tutorial overview of the field for both novice and seasoned stochastic computing researchers In the second part comprising Chapters 3 to 8 we review both well established and emerging design approaches for stochastic computing systems with a focus on accuracy correlation sequence generation and synthesis The last part comprising Chapters 9 and 10 provides insights into applications in machine learning and error control coding

Structured Peer-to-Peer Systems Dmitry Korzun, Andrei Gurtov, 2012-11-12 The field of structured P2P systems has seen fast growth upon the introduction of Distributed Hash Tables DHTs in the early 2000s The first proposals including Chord Pastry Tapestry were gradually improved to cope with scalability locality and security issues By utilizing the processing and bandwidth resources of end users the P2P approach enables high performance of data distribution which is hard to achieve with traditional client server architectures The P2P computing community is also being actively utilized for software updates to the Internet P2PSIP VoIP video on demand and distributed backups The recent introduction of the identifier locator split proposal for future Internet architectures poses another important application for DHTs namely mapping between host permanent identity and changing IP address The growing complexity and scale of modern P2P systems requires the introduction of hierarchy and intelligence in routing of requests Structured Peer to Peer Systems covers fundamental issues in organization optimization and tradeoffs of present large scale structured P2P systems as well as provides principles analytical models and simulation methods applicable in designing future systems Part I presents the state of the art of structured P2P systems popular DHT topologies and protocols and the design challenges for efficient P2P network topology organization routing scalability and security Part II shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable performance and security constraints Although the strategies are local their efficiency is due to elements of hierarchical organization which appear in many DHT designs that traditionally are considered as flat ones Part III describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge still partial about the entire system These methods were formed in the evolution

of hierarchical organization from flat DHT networks to hierarchical DHT architectures look ahead routing and topology aware ranking Part IV highlights some known P2P based experimental systems and commercial applications in the modern Internet The discussion clarifies the importance of P2P technology for building present and future Internet systems
