Luger, 2009 In this accessible comprehensive text George Luger captures the essence of artificial intelligence solving the complex problems that arise wherever computer technology is applied Ideal for an undergraduate course in AI the 6th Edition first presents the fundamental concepts of the discipline then goes into detail with the practical information necessary to implement the algorithms and strategies discussed Students learn how to use a number of different software tools and techniques to address the many challenges faced by today's computer scientists Artificial Intelligence Structures and Strategies for Complex Problem Solving is ideal for a one or two semester undergraduate course on AI      Artificial Intelligence: Structures and Strategies for Complex Problem Solving, 5/e George F. Luger, Luger, 2004 Much has changed since the early editions of Artificial Intelligence were published To reflect this the introductory material of this fifth edition has been substantially revised and rewritten to capture the excitement of the latest developments in AI work Artificial intelligence is a diverse field To ask the question what is intelligence is to invite as many answers as there are approaches to the subject of artificial intelligence These could be intelligent agents logical reasoning neural networks expert systems evolutionary computing and so on This fifth edition covers all the m      *Artificial Intelligence* George F. **Operations Research and Artificial Intelligence: The Integration of Problem-Solving Strategies** Donald E. Brown, Chelsea C. White III, 1990-08-31 The purpose of this book is to introduce and explain research at the boundary between two fields that view problem solving from different perspectives Researchers in operations research and artificial intelligence have traditionally remained separate in their activities Recently there has been an explosion of work at the border of the two fields as members of both communities seek to leverage their activities and resolve problems that remain intractable to pure operations research or artificial intelligence techniques This book presents representative results from this current flurry of activity and provides insights into promising directions for continued exploration This book should be of special interest to researchers in artificial intelligence and operations research because it exposes a number of applications and techniques which have benefited from the integration of problem solving strategies Even researchers working on different applications or with different techniques can benefit from the descriptions contained here because they provide insight into effective methods for combining approaches from the two fields Additionally researchers in both communities will find a wealth of pointers to challenging new problems and potential opportunities that exist at the interface between operations research and artificial intelligence In addition to the obvious interest the book should have for members of the operations research and artificial intelligence communities the papers here are also relevant to members of other research communities and development activities that can benefit from improvements to fundamental problem solving approaches

**Human and Machine Problem Solving** K.J. Gilhooly, 2012-04-24 Problem solving is a central topic for both cognitive psychology and artificial intelligence AI Psychology seeks to analyze naturally occurring problem solving into hypothetical processes while AI seeks to synthesize problem solving performance from well defined processes Psychology may suggest possible processes to AI and in turn AI may suggest plausible hypotheses to psychology It should be useful for both sides to have some idea of the other's contribution hence this book which brings together overviews of psychological and AI research in major areas of problem solving At a more general level this book is intended to be a contribution toward comparative cognitive science Cognitive science is the study of intelligent systems whether natural or artificial and treats both organisms and computers as types of information processing systems Clearly humans and typical current computers have rather different functional or cognitive architectures Thus insights into the role of cognitive architecture in performance may be gained by comparing typical human problem solving with efficient machine problem solving over a range of tasks Readers may notice that there is little mention of connectionist approaches in this volume This is because at the time of writing such approaches have had little or no impact on research at the problem solving level Should a similar volume be produced in ten

Methodologies and Approaches Rasiah Logananthara,Günther Palm,Moonis Ali,2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or changing rapidly The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents clear evidence of growing interest in this area      **Problem-Solving Methods** Dieter Fensel,2000-09-27 Researchers in Artificial Intelligence have traditionally

been classified into two categories the neaties and the scruffies According to the scruffies the neaties concentrate on building elegant formal frameworks whose properties are beautifully expressed by means of definitions lemmas and theorems but which are of little or no use when tackling real world problems The scruffies are described by the neaties as those researchers who build superficially impressive systems that may perform extremely well on one particular case study but whose properties and underlying theories are hidden in their implementation if they exist at all As a life long non card carrying scruffy I was naturally a bit suspicious when I first started collaborating with Dieter Fensel whose work bears all the formal hallmarks of a true neaty Even more alarming his primary research goal was to provide sound formal foundations to the area of knowledge based systems a traditional stronghold of the scruffies one of whom had famously declared it an art thus attempting to place it outside the range of the neaties and to a large extent succeeding in doing so
