Probabilistic Behaviour Of Harmonic Functions Progreb In Mathematics S:

Probabilistic Behavior of Harmonic Functions Rodrigo Banuelos,Charles N Moore,1999-08-01 Harmonic analysis and probability have long enjoyed a mutually beneficial relationship that has been rich and fruitful This monograph aimed at researchers and students in these fields explores several aspects of this relationship The primary focus of the text is the nontangential maximal function and the area function of a harmonic function and their probabilistic analogues in martingale theory The text first gives the requisite background material from harmonic analysis and discusses known results concerning the nontangential maximal function and area function as well as the central and essential role these have played in the development of the field The book next discusses further refinements of traditional results among these are sharp good lambda inequalities and laws of the iterated logarithm involving nontangential maximal functions and area functions Many applications of these results are given Throughout the constant interplay between probability and harmonic analysis is emphasized and explained The text contains some new and many recent results combined in a coherent presentation

Mathematical Reviews ,1990 **Index of Mathematical Papers** ,1985 *Physics Briefs* ,1988 Harmonic Analysis and the Theory of Probability Saloman Bochner,2022-08-19 This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1955 **Harmonic Analysis and the Theory of Probability** Salomon Bochner,2013-11-07 Written by a distinguished mathematician and educator this classic text emphasizes stochastic processes and the interchange of stimuli between probability and analysis It also introduces the author s innovative concept of the characteristic functional 1955 edition Some Topics in Probability and Analysis Richard F. Gundy,1989 This book is based on lectures presented by the author at DePaul University in July 1986 The lectures cover three main topics The first is local time theory for Brownian motion and some geometrical inequalities for harmonic functions in the upper half plane R n 1 _ The author sketches a proof of the inequalities obtained by Barlow and Yor for the maximal local time functional The second topic concerns a probabilistic treatment of Riesz transforms in R n 1 _ and semimartingale inequalities The author proves semimartingale inequalities of the type usually obtained for martingales The

Harmonic Analysis of Probability Measures on Hypergroups Walter R. Bloom,Herbert Heyer,1995 The series is devoted to the publication of monographs and high level textbooks in mathematics mathematical methods and their applications Apart from covering important areas of current interest a major aim is to make topics of an interdisciplinary nature accessible to the non specialist The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics In addition it can serve as a guide for lectures and seminars on a graduate level The series de Gruyter Studies in Mathematics was founded ca 35 years ago by the late Professor Heinz Bauer and Professor Peter Gabriel with the

aim to establish a series of monographs and textbooks of high standard written by scholars with an international reputation presenting current fields of research in pure and applied mathematics While the editorial board of the Studies has changed with the years the aspirations of the Studies are unchanged In times of rapid growth of mathematical knowledge carefully written monographs and textbooks written by experts are needed more than ever not least to pave the way for the next generation of mathematicians In this sense the editorial board and the publisher of the Studies are devoted to continue the Studies as a service to the mathematical community Please submit any book proposals to Niels Jacob Titles in planning include Flavia Smarazzo and Alberto Tesei Measure Theory Radon Measures Young Measures and Applications to Parabolic Problems 2019 Elena Cordero and Luigi Rodino Time Frequency Analysis of Operators 2019 Mark M Meerschaert Alla Sikorskii and Mohsen Zayernouri Stochastic and Computational Models for Fractional Calculus second edition 2020 Mariusz Lema czyk Ergodic Theory Spectral Theory Joinings and Their Applications 2020 Marco Abate Holomorphic Dynamics on Hyperbolic Complex Manifolds 2021 Miroslava Antic Joeri Van der Veken and Luc Vrancken Differential Geometry of Submanifolds Submanifolds of Almost Complex Spaces and Almost Product Spaces 2021 Kai Liu Ilpo Laine and Lianzhong Yang Complex Differential Difference Equations 2021 Rajendra Vasant Gurjar Kayo Masuda and Masayoshi Miyanishi Affine Space Fibrations 2022 **Harmonic Functions on Groups and Fourier Algebras** Cho-Ho Chu,Anthony To-Ming Lau,2002-05-27 This research monograph introduces some new aspects to the theory of harmonic functions and related topics The authors study the analytic algebraic structures of the space of bounded harmonic functions on locally compact groups and its non commutative analogue the space of harmonic functionals on Fourier algebras Both spaces are shown to be the range of a contractive projection on a von Neumann algebra and therefore admit Jordan algebraic structures This provides a natural setting to apply recent results from non associative analysis semigroups and Fourier algebras Topics discussed include Poisson representations Poisson spaces quotients of Fourier algebras and the Murray von Neumann classification of harmonic functionals Harmonic Function Theory Sheldon Axler,Paul Bourdon,Wade Ramey,2006-05-04 Harmonic functions the solutions of Laplace s equation play a crucial role in many areas of mathematics physics and engineering Avoiding the disorganization and inconsistent notation of other expositions the authors approach the field from a more function theoretic perspective emphasizing techniques and results that will seem natural to mathematicians comfortable with complex function theory and harmonic analysis prerequisites for the book are a solid foundation in real and complex analysis together with some basic results from functional analysis Topics covered include basic properties of harmonic functions defined on subsets of Rn including Poisson integrals properties bounded functions and positive functions including Liouville s and Cauchy s theorems the Kelvin transform Spherical harmonics hp theory on the unit ball and on half spaces harmonic Bergman spaces the decomposition theorem Laurent expansions and classification of isolated singularities and boundary behavior An appendix describes routines for use with MATHEMATICA to manipulate some of the expressions
