**Prospects in Mathematical Physics** José C. Mourão, 2007 This book includes papers presented at the Young Researchers Symposium of the 14th International Congress on Mathematical Physics held in July 2003 in Lisbon Portugal The goal of this book is to illustrate various promising areas of mathematical physics in a way accessible to researchers at the beginning of their career Two of the three laureates of the Henri Poincaré Prizes Huzihiro Araki and Elliott Lieb also contributed to this volume The book provides a good survey of some active areas of research in modern mathematical physics

**Geometric Analysis and Nonlinear Partial Differential Equations** Stefan Hildebrandt, Hermann Karcher, 2012-12-06 This book is not a textbook but rather a coherent collection of papers from the field of partial differential equations Nevertheless we believe that it may very well serve as a good introduction into some topics of this classical field of analysis which despite of its long history is highly modern and well prospering Richard Courant wrote in 1950 It has always been a temptation for mathematicians to present the crystallized product of their thought as a deductive general theory and to relegate the individual mathematical phenomenon into the role of an example The reader who submits to the dogmatic form will be easily indoctrinated Enlightenment however must come from an understanding of motives live mathematical development springs from specific natural problems which can be easily understood but whose solutions are difficult and demand new methods or more general significance We think that many if not all papers of this book are written in this spirit and will give the reader access to an important branch of analysis by exhibiting interesting problems worth to be studied Most of the collected articles have an extensive introductory part describing the history of the presented problems as well as the state of the art and offer a well chosen guide to the literature This way the papers became lengthier than customary these days but the level of presentation is such that an advanced graduate student should find the various articles both readable and stimulating

Evolution Equations: Applications to Physics, Industry, Life Sciences and Economics Mimmo Iannelli, Gunter Lumer, 2012-12-06 The seventh International Conference on Evolution Equations and their main areas of Applications where the emphasis evolves as time and problems change was held October 30 to November 4 at the CIRM Centro Internazionale per la Ricerca Matematica in Trento Italy In keeping with the basic principles and the recent tendencies governing these International Conferences it brought together many of the world's leading experts in the fields mentioned with particular effort on facilitating the interaction of established scientists and emerging young promising researchers as well as the interaction of pure and applied specialists In the latter directions emphasis was extended here to include in addition to Physical and Life Sciences also Industry and Economics Topics among the recent advances treated here concern new developments in moving boundary problems asymptotics in non linear Volterra equations and other asymptotics related developments Poincaré inequality on stratified sets time operator and Markov processes in physics related advances behavior of granular matter stochastic aspects of Hamilton Jacobi Bellman equation very general Paley Wiener results
