Its aim is the same as its first book. We want to assist undergraduate students or first year students who study mathematics in learning their first rigorous real analysis course. The wide variety of problems which are of varying difficulty include the following topics: Sequences and Series of Functions, Improper Integrals, Lebesgue Measure, Lebesgue Measurable Functions, Lebesgue Integration, Differential Calculus of Functions of Several Variables, and Integral Calculus of Functions of Several Variables. Furthermore, the main features of this book are listed as follows:

- 1 The book contains 226 problems which cover the topics mentioned above with detailed and complete solutions. Particularly, we include over 100 problems for the Lebesgue integration theory which I believe is totally new to all undergraduate students.
- 2 Each chapter starts with a brief and concise note of introducing the notations, terminologies, basic mathematical concepts, or important famous frequently used theorems without proofs relevant to the topic.
- 3 Three levels of difficulty have been assigned to problems so that you can sharpen your mathematics step by step.
- 4 Different colors are used frequently in order to highlight or explain problems, examples, remarks, main points, formulas involved, or show the steps of manipulation in some complicated proofs.
