Dutch progress in the standardization of geotextile test methods

de Groot, M T; den Hoedt, G; Nijhof, A H J

Proc International Geotechnical Symposium on Theory and Practice of Earth Reinforcement, Fukuoka Kyushu, 5-7

October 1988 P73-80. Publ Rotterdam: A A Balkema, 1988

Increasing use of geotextiles necessitates standardisation of test methods for meaningful comparison of properties. Progress towards this in Holland is described. Draft standards for permeability (filter velocity/hydraulic head) and pore size tests are presented. Strip and wide width tensile tests have been evaluated. The influence of specimen width and clamp systems for woven and nonwoven textiles is discussed.

Clay geotextile interaction in in-soil tensile tests

Fabian, K J; Fourie, A B

Proc International Geotechnical Symposium on Theory and Practice of Earth Reinforcement, Fukuoka Kyushu, 5-7

October 1988 P81-86. Publ Rotterdam: A A Balkema, 1988

In-soil tensile tests on woven and non-woven needle punched geotextiles confined in clay are described. Typical load-displacement curves are illustrated. Geotextile modulus is significantly increased by confining stress, up to 10 times for nonwoven fabric, up to 3 times for woven. The primary mechanism of modulus improvement is increased interfibre friction for woven fabric, and interlocking of soil particles and fibres for nonwoven.

Friction characteristics of polypropylene straps in reinforced minestone

Finlay, T W; Wei, M J; Hytiris, N

Proc International Geotechnical Symposium on Theory and Practice of Earth Reinforcement, Fukuoka Kyushu, 5-7

October 1988 P87-92. Publ Rotterdam: A A Balkema, 1988

Minestone (unburnt colliery spoil) is widely available. Its potential for use in reinforced earth retaining walls with polypropylene straps, which offer better corrosion resistance than galvanised steel, has been investigated. Large shear box tests and laboratory and full scale pullout tests are described. Results are presented and differences in behaviour of ribbed steel and polypropylene reinforcement discussed.

902319

Strength characteristics of reinforced sand in large scale triaxial compression test

Fukushima, S; Mochizuki, Y; Kagawa, K

Proc International Geotechnical Symposium on Theory and Practice of Earth Reinforcement, Fukuoka Kyushu, 5-7

October 1988 P93-98. Publ Rotterdam: A A Balkema, 1988

Large scale triaxial tests were carried out to examine strength and deformation properties of reinforced sand. Specimens were 120cm diameter by 240cm high and contained full size geogrid, nonwoven fabric or metal strip reinforcement. Performance of reinforced and unreinforced sand is compared. The mechanism of reinforcement and deformation restraint effects are discussed.

Functions and effects of reinforcing materials in earth reinforcement

Hayashi, S; Ochiai, H; Yoshimoto, A; Sato, K; Kitamura, T

Proc International Geotechnical Symposium on Theory and Practice of Earth Reinforcement, Fukuoka Kyushu, 5-7

October 1988 P99-104. Publ Rotterdam: A A Balkema, 1988

A new, large-scale direct shear apparatus has been developed which allows testing with uniform or non-uniform strain conditions. The apparatus is used to study the effects of metal bar and polymer grid reinforcements on behaviour of sand. Effects of the orientation of the reinforcement with respect to the direction of shear, and whether it is under tensile or compressive loading, were also studied.

902321

Present state of knowledge of long term behaviour of materials used as soil reinforcements

Jailloux, J M; Segrestin, P

Proc International Geotechnical Symposium on Theory and Practice of Earth Reinforcement, Fukuoka Kyushu, 5-7

October 1988 P103-110. Publ Rotterdam: A A Balkema, 1988

Long term behaviour of the common reinforcement materials used in soils, galvanised steel, aluminium alloys, and polymers, is examined with reference to required service life. Degradation and deterioration mechanisms are considered, as are effects of soil chemistry and temperature. Current knowledge, areas of limited knowledge and research requirements are discussed.

902322

Creep behaviour of geotextiles

Kabir, M H

Proc International Geotechnical Symposium on Theory and Practice of Earth Reinforcement, Fukuoka Kyushu, 5-7

October 1988 P111-116. Publ Rotterdam: A A Balkema, 1988

Creep laws for polymeric geotextiles are examined and a generalised nonlinear constitutive equation which gives good fit with experimental data is presented for practical applications. Suitable test techniques and methods for data analysis and presentation are suggested. Stiffness values from short term testing should not be used to infer long term behaviour. Data for four generic geotextiles are presented.

902323

Long-term pull-out tests on polymergrids in sand

Kutara, K; Aoyama, N; Yawwaga, H; Kato, T

Proc International Geotechnical Symposium on Theory and Practice of Earth Reinforcement, Fukuoka Kyushu, 5-7

October 1988 P117-122. Publ Rotterdam: A A Balkema, 1988

Friction/adhesion behaviour between sand and polymer grids was examined using displacement controlled short term pull-out tests and load controlled long term pullout tests. Friction was dependent on density of sand, confining pressure, pullout force and testing method. For long term tests, frictional behaviour is controlled by long term deformation of the grid itself, rather than by long term shear deformation between sand and grid. Each bar of the grid deforms, but the free end is little displaced.

A three-day Symposium on Clastic Tidal Deposits was organized in Utrecht in August 1985 and attended by about 200 participants. During the meeting, some 60 papers and 25 posters were presented, while simultaneously workshops on various topics were held. The meeting was generously sponsored by the International Association of Sedimentologists, the Royal Dutch/Shell Exploration and Production Laboratories, British Petroleum Company, Chevron Oil Company, and KLM. This volume contains extended versions of papers that were presented during the meeting, papers reporting about items studied during the excursions, and more over several contributions which were solicited after the conference. In order to make the volume more representative, as in most fields of sedimentological research, the comparison of recent processes and products with ancient counterparts and vice versa is important for understanding the full sequence of processes and events that lead to the final end product of tide-influenced sedimentary environments. In this respect, we are happy that recent as well as fossil sediments get ample attention. Research on tidal sedimentary processes and products has traditionally put much emphasis on siliciclastic sediments. Still, carbonate and mixed carbonate-siliciclastic sediments, though being subject to tidal influences in many places, receive little attention in this respect, which we regret is also reflected in this volume.
