**Artificial Intelligence in Business** Pavankumar Gurazada & Seema Gupta, Artificial Intelligence in Business is transforming the way organizations operate driving innovation increasing efficiency and enabling smarter data driven decision making Yet for many professionals and students the gap between complex technical concepts and practical business applications can feel overwhelming This book bridges that gap with clarity relevance and purpose Designed for MBA students business leaders and aspiring AI practitioners Artificial Intelligence in Business cuts through the hype to provide a grounded accessible and actionable guide to real world AI From foundational principles like machine learning and deep learning to advanced applications in marketing finance supply chain and HR each chapter offers practical insights supported by real world use cases and code implementations Whether you re aiming to enhance customer engagement streamline operations or manage risk more effectively this book equips you with the knowledge and tools to apply AI strategically in a business context

**The History of the GPU - New Developments** Jon Peddie, 2023-01-01 This third book in the three part series on the History of the GPU covers the second to sixth eras of the GPU which can be found in anything that has a display or screen The GPU is now part of supercomputers PCs Smartphones and tablets wearables game consoles and handhelds TVs and every type of vehicle including boats and planes In the early 2000s the number of GPU suppliers consolidated to three whereas now the number has expanded to almost 20 In 2022 the GPU market was worth over 250 billion with over 2.2 billion GPUs being sold just in PCs and more than 10 billion in smartphones Understanding the power and history of these devices is not only a fascinating tale but one that will aid your understanding of some of the developments in consumer electronics computers new automobiles and your fitness watch

*Spatial Gems, Volume 1* John Krumm, Andreas Züfle, Cyrus Shahabi, 2022-08-08 This book presents fundamental new techniques for understanding and processing geospatial data These spatial gems articulate and highlight insightful ideas that often remain unstated in graduate textbooks and which are not the focus of research papers They teach us how to do something useful with spatial data in the form of algorithms code or equations Unlike a research paper Spatial Gems Volume 1 does not focus on Look what we have done but rather shows Look what YOU can do With contributions from researchers at the forefront of the field this volume occupies a unique position in the literature by serving graduate students professional researchers professors and computer developers in the field alike

*Tools for High Performance Computing 2011* Holger Brunst, Matthias S. Müller, Wolfgang E. Nagel, Michael M. Resch, 2012-09-21 The proceedings of the 5th International Workshop on Parallel Tools for High Performance Computing provide an overview on supportive software tools and environments in the fields of System Management Parallel Debugging and Performance Analysis In the pursuit to maintain exponential growth for the performance of high performance computers the HPC community is currently targeting Exascale Systems The initial planning for Exascale already started when the first Petaflop system was delivered Many challenges need to be addressed to reach the necessary performance Scalability energy

efficiency and fault tolerance need to be increased by orders of magnitude The goal can only be achieved when advanced hardware is combined with a suitable software stack In fact the importance of software is rapidly growing As a result many international projects focus on the necessary software Real-time Massive Model Rendering Sung-eui Yoon,2008

Interactive display and visualization of large geometric and textured models is becoming a fundamental capability There are numerous application areas including games movies CAD virtual prototyping and scientific visualization One of observations about geometric models used in interactive applications is that their model complexity continues to increase because of fundamental advances in 3D modeling simulation and data capture technologies As computing power increases users take advantage of the algorithmic advances and generate even more complex models and data sets Therefore there are many cases where we are required to visualize massive models that consist of hundreds of millions of triangles and even billions of triangles However interactive visualization and handling of such massive models still remains a challenge in computer graphics and visualization In this monograph we discuss various techniques that enable interactive visualization of massive models These techniques include visibility computation simplification levels of detail and cache coherent data management We believe that the combinations of these techniques can make it possible to interactively visualize massive models in commodity hardware BOOK JACKET Pushing Frontiers - Imaging For Photon Science Jiaguo Zhang,Iain Sedgwick,Cornelia B. Wunderer,2024-12-24

Developments of cutting edge X ray imaging detectors are largely driven by experiments at the large photon science facilities i e the synchrotron radiation sources and free electron lasers FELs which enable a wealth of investigations in physics material science biology chemistry environmental sciences and beyond The next generation radiation sources namely diffraction limited storage rings DLSR and high repetition rate FELs operated in the continuous wave CW mode not only offer brilliant opportunities for research but also pose new challenges and requirements for the X ray detectors required to exploit them fully Examples include the high count rate capability required at the DLSRs the ultra high continuous frame rate and data throughput at the FELs and a broad photon energy range from tens of eV to hundreds of keV spanned by the facilities In order to meet the new requirements posed by the most advanced photon science facilities envisioned or already under development around the world today various novel photon detection and imaging concepts are being investigated and detector technologies are advancing fast The goal of this research topic is to address the challenges and discuss the critical problems encountered in imaging systems for photon science including but not limited to sensing materials ASICs readout electronics detector systems and data reduction Moreover it will encompass a discussion of the development strategies technological advances and recent achievements of each subject thereby facilitating the realization of complete concepts for novel imaging systems as well as further developments of individual detector technologies Wall Street & Technology ,2008 Bioinformatics Bertil Schmidt,2011 A compilation of recent approaches from prominent researchers this referencediscusses how to take advantage of bioinformatics applications and algorithmson a
