Proboscidea Evolution And Palaeoecology Of Elephants And Their Relatives:

The Proboscidea Jeheskel Shoshani, Pascal Tassy, 1996 The Proboscidea of which only two species of elephant survive today were one of the great mammalian orders of the Cenozoic Their success over evolutionary time is reflected by their morphological and taxonomic diversity their nearly worldwide distribution on every continent except Australia and Antarctica and their persistence through nearly fifty million years Their great past ability to migrate and to adapt to changing climatic conditions and interspecific competition provides a unique laboratory for the testing of evolutionary theories and development of new concepts This is the first complete treatise on the evolution and palaeoecology of this group for half a century It reviews their classification and phylogeny the early differentiation of proboscideans the major adaptive radiations and their evolutionary patterns and the origins and current status of extant elephant species Written by leading international experts this is a major study documenting the record of terrestrial biodiversity Paleontology and Geology of Laetoli: Human Evolution in Context Terry Harrison, 2011-01-27 This volume 2 and its companion volume 1 present the results of new investigations into the geology paleontology and paleoecology of the early hominin site of Laetoli in northern Tanzania The site is one of the most important paleontological and paleoanthropological sites in Africa world renowned for the discovery of fossils of the early hominin *Australopithecus afarensis* as well as remarkable trails of its footprints The first volume provides new evidence on the geology geochronology ecology ecomorphology and taphonomy of the site The second volume describes newly discovered fossil hominins from Laetoli belonging to *Australopithecus afarensis* and *Paranthropus aethiopicus* and presents detailed information on the systematics and paleobiology of the diverse associated fauna Together these contributions provide one of the most comprehensive accounts of a fossil hominin site and they offer important new insights into the early stages of human evolution and its context Cenozoic Mammals of Africa Lars Werdelin, William Joseph Sanders, 2010-07-20 This impressively comprehensive volume is a long awaited and worthy successor to the now outdated 1978 classic *Evolution of African Mammals* A must have reference work for everyone interested in mammalian evolution David Pilbeam Harvard University and the Peabody Museum of Archaeology and Ethnology **Lothagam** Meave G. Leakey, John M. Harris, 2003-01-23 Located at the southwest corner of Lake Turkana in northern Kenya Lothagam represents one of the most important intervals in African prehistory Early human remains are restricted in distribution to Africa and the acquisition of an upright bipedal striding gait the hallmark of humanity appears to be at least circumstantially linked to the reduction of equatorial forests and the spread of grasslands on that continent The diverse Lothagam fauna documents the end Miocene transition from forested to more open habitats that were exploited by grazing horses and antelopes hippos giant pigs and true elephants It also includes spectacularly complete fossil carnivore skeletons and some of the oldest human remains Enlisting a team of highly qualified specialists this book provides the geologic context and dating framework for the Lothagam fossiliferous sequences describes the immense diversity of vertebrate fossils recovered from the Late Miocene and

Early Pliocene sediments and synthesizes the results to interpret the changing paleoenvironments that prevailed at this site. The book will interest anthropologists, paleontologists, geologists, and anyone interested in human origins.

Mammals of Africa: Volume I Jonathan Kingdon, 2014-11-20. *Mammals of Africa MoA* is a series of six volumes which describes in detail every currently recognized species of African land mammal. This is the first time that such extensive coverage has ever been attempted, and the volumes incorporate the very latest information and detailed discussion of the morphology, distribution, biology, and evolution, including reference to fossil and molecular data of Africa's mammals. With more than 1 160 species and 16 18 orders, Africa has the greatest diversity and abundance of mammals in the world. The reasons for this and the mechanisms behind their evolution are given special attention in the series. Each volume follows the same format with detailed profiles of every species and higher taxa. The series includes hundreds of colour illustrations and pencil drawings by Jonathan Kingdon, highlighting the morphology and behaviour of the species concerned, as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold. Every species also includes a detailed distribution map. Edited by Jonathan Kingdon, David Happold, Tom Butynski, Mike Hoffmann, Meredith Happold, and Jan Kalina, and written by more than 350 authors, all experts in their fields, *Mammals of Africa* is as comprehensive a compendium of current knowledge as is possible. Extensive references alert readers to more detailed information. This first volume in the series comprises eight introductory chapters covering topics such as evolution, geography, and geology, biotic zones, classification, behaviour, and morphology. The rest of the book is devoted to the Afrotheria, a grouping that comprises six orders and 49 species; these are the hyraxes, elephants, manatees, otter shrews, golden moles, sengis, elephant shrews, and Aardvark.
