International Conference on Distributed Computing Systems* ,2000 **Distributed Systems for System Architects** Paulo Veríssimo,Luís Rodrigues,2012-12-06 The primary audience for this book are advanced undergraduate students and graduate students Computer architecture as it happened in other fields such as electronics evolved from the small to the large that is it left the realm of low level hardware constructs and gained new dimensions as distributed systems became the keyword for system implementation As such the system architect today assembles pieces of hardware that are at least as large as a computer or a network router or a LAN hub and assigns pieces of software that are self contained such as client or server programs Java applets or protocol modules to those hardware components The freedom she he now has is tremendously challenging The problems alas have increased too What was before mastered and tested carefully before a fully fledged mainframe or a closely coupled computer cluster came out on the market is today left to the responsibility of computer engineers and scientists invested in the role of system architects who fulfil this role on behalf of software vendors and integrators add value system developers R D institutes and final users As system complexity size and diversity grow so increases the probability of inconsistency unreliability non responsiveness and insecurity not to mention the management overhead What System Architects Need to Know The insight such an architect must have includes but goes well beyond the functional properties of distributed systems **Distributed Computing Systems (ICDCS 2000): Proceedings 20th IEEE International Conference, Taipei, Taiwan, 2000** IEEE Computer Society Staff,2000 Performance Analysis of Parallel Applications for HPC Jidong Zhai,Yuyang Jin,Wenguang Chen,Weimin Zheng,2023-09-09 This book presents a hybrid static dynamic approach for efficient performance analysis of parallel applications on HPC systems Performance analysis is essential to finding

performance bottlenecks and understanding the performance behaviors of parallel applications on HPC systems However current performance analysis techniques usually incur significant overhead Our book introduces a series of approaches for lightweight performance analysis We combine static and dynamic analysis to reduce the overhead of performance analysis Based on this hybrid static dynamic approach we then propose several innovative techniques for various performance analysis scenarios including communication analysis memory analysis noise analysis computation analysis and scalability analysis Through these specific performance analysis techniques we convey to readers the idea of using static analysis to support dynamic analysis To gain the most from the book readers should have a basic grasp of parallel computing computer architecture and compilation techniques
