Proceedings Of The 1995 Workshop On Dibociative Recombination:

Novel Aspects Of Electron-molecule Collisions Kurt H Becker, 1998-05-21 Electron molecule collisions have been studied extensively by both experimentalists and theorists since the early years of this century The past ten years have seen a remarkable renaissance in experimental and theoretical activities in the study of electron collision processes with molecules This was stimulated i by the advent of more powerful computers and new theoretical concepts that allow the study of complex targets and collision processes with a multitude of final states such as ionization and dissociation and the investigation of collisions with oriented and aligned molecules ii by advances in experimental instrumentation improved electron spectrometers intense sources of spin polarized electrons position sensitive detectors and iii by the discovery of a new class of species e g large stable carbon clusters or fullerenes which opened up a new field of theoretical and experimental research in which collisions involving fullerenes as targets or as projectiles constitute an important component Lastly electron molecule collisions are a key component in efforts to characterize diagnose describe and model the complex processes in low temperature plasmas which are of ever increasing importance in many rapidly developing high tech applications such as the fabrication of microelectronic chips in the controlled deposition of thin films and in plasma assisted surface modification processes This book covers the activities in all those areas *Index of Conference Proceedings* British Library. Document Supply Centre, 1997 Advances in Atomic, Molecular, and Optical Physics, 1997-11-14 Praise for the Series This volume maintains the authoritative standards of the series The editors and publishers are to be congratulated M S Child in Physics Bulletin Maintains the high standards of earlier volumes in the series All the articles are written by experts in the field and their summaries are most timely Strongly recommended G Herzberg in American Scientist Proceedings of the 1995 Workshop on Dissociative Recombination Daniel Zajfman, 1996 *Kokuritsu Kokkai Toshokan shozō kagaku gijyutsu kankei Ōbun kaigiroku mokuroku* Kokuritsu Kokkai Toshokan (Japan), 1997 □□□□□□□□□□□□□□□□□□□□ , 1997 □□□□□□□□ □□□□□□□□□□□□□□□□□□□□ (Japan), 1997 **The Cumulative Book Index**, 1997 A world list of books in the English language

Monthly Catalog of United States Government Publications ,1994 Molecular Physics and Hypersonic Flows
M. Capitelli,2012-12-06 Molecular Physics and Hypersonic Flows bridges the gap between the fluid dynamics and molecular physics communities emphasizing the role played by elementary processes in hypersonic flows In particular the work is primarily dedicated to filling the gap between microscopic and macroscopic treatments of the source terms to be inserted in the fluid dynamics codes The first part of the book describes the molecular dynamics of elementary processes both in the gas phase and in the interaction with surfaces by using quantum mechanical and phenomenological approaches A second group of contributions describes thermodynamics and transport properties of air components with special attention to the transport of internal energy A series of papers is devoted to the experimental and theoretical study of the flow of partially ionized gases

Subsequent contributions treat modern computational techniques for 3 D hypersonic flow Non equilibrium vibrational kinetics are then described together with the coupling of vibration dissociation processes as they affect hypersonic flows Special emphasis is given to the interfacing of non equilibrium models with computational fluid dynamics methods Finally the last part of the book deals with the application of direct Monte Carlo methods in describing rarefied flows **Inspe**
