Operating Systems for Supercomputers and High Performance Computing Balazs Gerofi, Yutaka Ishikawa, Rolf Riesen, Robert W. Wisniewski, 2019-10-15. Few works are as timely and critical to the advancement of high performance computing than is this new up to date treatise on leading edge directions of operating systems. It is a first hand product of many of the leaders in this rapidly evolving field and possibly the most comprehensive. This new and important book masterfully presents the major alternative concepts driving the future of operating system design for high performance computing. In particular it describes the major advances of monolithic operating systems such as Linux and Unix that dominate the TOP500 list. It also presents the state of the art in lightweight kernels that exhibit high efficiency and scalability at the loss of generality. Finally this work looks forward to possibly the most promising strategy of a hybrid structure combining full service functionality with lightweight kernel operation. With this it is likely that this new work will find its way on the shelves of almost everyone who is in any way engaged in the multi discipline of high performance computing. From the foreword by Thomas Sterling.
