Proceedings Of The Asme Fluids Eng Volume 1:

Cavitation in Non-Newtonian Fluids Emil Brujan, 2010-09-28 Non Newtonian properties on bubble dynamics and cavitation are fundamentally different from those of Newtonian fluids The most significant effect arises from the dramatic increase in viscosity of polymer solutions in an extensional flow such as that generated about a spherical bubble during its growth or collapse phase In addition many biological fluids such as blood synovial fluid and saliva have non Newtonian properties and can display significant viscoelastic behaviour This monograph elucidates general aspects of bubble dynamics and cavitation in non Newtonian fluids and applies them to the fields of biomedicine and bioengineering In addition it presents many examples from the process industries The field is strongly interdisciplinary and the numerous disciplines involve have and will continue to overlook and reinvent each others work This book helps researchers to think intuitively about the diverse physics of these systems to attempt to bridge the various communities involved and to convey the interest elegance and variety of physical phenomena that manifest themselves on the micrometer and microsecond scales *FY ..*
