Lectures on Quantum Gravity Andres Gomberoff, Donald Marolf, 2006-05-30 The 2002 Pan American Advanced Studies Institute School on Quantum Gravity was held at the Centro de Estudios Científicos CECS Valdivia Chile January 4-14 2002. The school featured lectures by ten speakers and was attended by nearly 70 students from over 14 countries. A primary goal was to foster interaction and communication between participants from different cultures both in the layman's sense of the term and in terms of approaches to quantum gravity. We hope that the links formed by students and the school will persist throughout their professional lives continuing to promote interaction and the essential exchange of ideas that drives research forward. This volume contains improved and updated versions of the lectures given at the School. It has been prepared both as a reminder for the participants and so that these pedagogical introductions can be made available to others who were unable to attend. We expect them to serve students of all ages well.

Advances in the Interplay Between Quantum and Gravity Physics Peter G. Bergmann, V. de Sabbata, 2012-12-06 In this XVII Course of the International School of Cosmology and Gravitation devoted to ADVANCES IN THE INTERPLAY BETWEEN QUANTUM AND GRAVITY PHYSICS we have considered different aspects of the influence of gravity on quantum systems. In order to achieve this aim in many lectures, seminars and discussions we have strengthened the interplay between gravity and quantum systems starting from the situation in the early universe based on astrophysical observations up to the earthly based experiments with atom interferometry for probing the structure of space time. Thus we have had timely lectures on the quantum field and horizon of a black hole including reviews of the problem of black holes thermodynamics and entropy, quantum information, quantum black holes, quantum evaporation and Hawking radiation, recent advances in stochastic gravity. We have also discussed quantum fluctuations in inflationary universe, quantum effects and reheating after inflation and superplanckian energies in Hawking radiation. In this regard the subject of spinors in purely affine space time and Dirac matter according to Weyl in the generalized theory of gravitation were developed. The dualism between space time and matter has been deeply analyzed in order to see why for general relativity this is an obstacle for quantization of the theory. Also canonical Gravity and Mach's principle, torsion and curvature as commutator for Quantum Gravity and Dirac Geometry of real space time were analysed together with the problem of 5 Dimensional Projective Unified Field theory and Multidimensional Gravity and Cosmology.

Cosmological and Black Hole Apparent Horizons Valerio Faraoni, 2015-07-01 This book overviews the extensive literature on apparent cosmological and black hole horizons. In theoretical gravity dynamical situations such as gravitational collapse, black hole evaporation and black holes interacting with non trivial environments as well as the attempts to model gravitational waves occurring in highly dynamical astrophysical processes require that the concept of event horizon be generalized. Inequivalent notions of horizon abound in the technical literature and are discussed in this manuscript. The book

begins with a quick review of basic material in the first one and a half chapters establishing a unified notation Chapter 2 reminds the reader of the basic tools used in the analysis of horizons and reviews the various definitions of horizons appearing in the literature Cosmological horizons are the playground in which one should take baby steps in understanding horizon physics Chapter 3 analyzes cosmological horizons their proposed thermodynamics and several coordinate systems The remaining chapters discuss analytical solutions of the field equations of General Relativity scalar tensor and $f(R)$ gravity which exhibit time varying apparent horizons and horizons which appear and or disappear in pairs An extensive bibliography enriches the volume The intended audience is master and PhD level students and researchers in theoretical physics with knowledge of standard gravity

SIAM Journal on Scientific Computing ,2001 *Semiclassical and Stochastic Gravity* Bei-Lok B. Hu,Enric Verdaguer,2020-03-05 The two pillars of modern physics are general relativity and quantum field theory the former describes the large scale structure and dynamics of space time the latter the microscopic constituents of matter Combining the two yields quantum field theory in curved space time which is needed to understand quantum field processes in the early universe and black holes such as the well known Hawking effect This book examines the effects of quantum field processes back reacting on the background space time which become important near the Planck time 10^{-43} sec It explores the self consistent description of both space time and matter via the semiclassical Einstein equation of semiclassical gravity theory exemplified by the inflationary cosmology and fluctuations of quantum fields which underpin stochastic gravity necessary for the description of metric fluctuations space time foams Covering over four decades of thematic development this book is a valuable resource for researchers interested in quantum field theory gravitation and cosmology

Towards a Theory of Spacetime Theories Dennis Lehmkuhl,Gregor Schiemann,Erhard Scholz,2017-01-05 This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world wide experts from physics philosophy and history in order to address a set of questions first posed in the 1950s How do we compare spacetime theories How do we judge objectively which is the best theory Is there even a unique answer to this question The goal of the workshop and of this book is to contribute to the development of a meta theory of spacetime theories Such a meta theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences deliver a framework for a class of theories that could be helpful as a blueprint to build other meta theories and provide a higher level viewpoint for judging which theory most accurately describes nature But rather than drawing a map in broad strokes the focus is on particularly rich regions in the

space of spacetime theories This work will be of interest to physicists as well as philosophers and historians of science working with or interested in General Relativity and or Space Time and Gravitation more generally
