Science, Technology and Society Wenceslao J. González, 2005

The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values cultural political economic of science and technology

Conflicting Philosophies and International Trade Law Michael Burkard, 2017-10-17 This book reveals how conflicting worldviews are at the root of public controversies on policy

and trade issues It highlights the particularly controversial disputes at the level of the World Trade Organization in the case of regulating beef hormones and GMOs aiming to show how negotiators of international agreements members of dispute settlement bodies and policy makers in general could have recourse to concepts of other disciplines such as epistemology and philosophy in order to address deadlocked legal disputes Ultimately the book is a manifesto for independent and critical research *Recasting Risk and Scientific Discourse* Napoleon Kilates Juanillo,1994 **Ethics and Risk Management in Engineering** Albert Flores,1989-09-30 Essays originally written for presentation at the Third National Conference on Engineering Ethics convened in May 1985 in Los Angeles Calif Includes bibliographical references p 239 260

Verhandlungen des Deutschen Bundestages Germany. Bundestag,2000 **Social Theories of Risk** Sheldon Krinsky,Dominic Golding,1992-08-30 The social science approach to risk has matured over the past two decades with distinct paradigms developing in disciplines such as anthropology economics geography psychology and sociology Social Theories of Risk traces the intellectual origins and histories of twelve of the established and emerging paradigms from the perspective of their principal proponents Each contributor examines the underlying assumptions of his or her paradigm the foundational issue it seeks to address and likely future directions of research Taken together these essays illustrate that the principal achievement of social sciences has been to broaden the debate about risk beyond the narrow technical considerations of engineers and the physical and life sciences The authors conclude that expert knowledge is not value free that public perceptions of and attitudes toward risks vary according to a wide range of social psychological and cultural variables and that public opposition to particular risks cannot be assuaged by technical fixes The essays reveal the circuitous paths that lead people to the study of risk highlight how these paths have crossed and discuss some of the seminal influences on individuals and the field in general Social Theories of Risk presents a broad retrospective view of the state of the theory in the social sciences written by many who have been on the cutting edge of risk research since its early days The book includes both established and novel perspectives that address the theoretical foundations of the field and reflect what we know about risk as a psychological social and cultural phenomenon The collection of papers not only informs us of the tributary ideas that spawned the social studies of risk but also how the field has matured The biographical flavor of the essays provides fascinating reading for established members of the field and a valuable entree for newcomers It is an ideal college text for courses in the history of science environmental policy and science technology and society as well as the burgeoning array of more specialized courses in risk assessment and management **Risk, issues in health & safety** ,1992 **Methodology and Science** ,1986 Teaching Science and Technology Studies Steve Fuller,Sujatha Raman,1991 **Riskante Technologien** Wolfgang Krohn,1993 **Science & Public Policy** ,1986 *Sharing Environmental Risks* Raymond Burby,1991-01-09 Law and Uncertainty:Risks and Legal Processes Robert Baldwin,Peter Cane,1997-01-17 Law and Uncertainty Risks and Legal Processes examines the role of the law and legal institutions in coping with the risks and

uncertainties that pervade our lives it examines key concerns such as how issues relating to risks can be dealt with by means of legal processes and how risks can be controlled through different legal formulations and techniques The contents cover a wide range of risk issues as they arise in legal contexts ranging from the problems of assessing risks within the criminal justice system To The difficulties that judges encounter in processing risk laden issues through the courts This study brings together papers delivered at the WG Hart Legal Workshop of 1995 held at the Institute for Advanced Legal Studies in London
