International Journal of Sport Finance ,2007 **Interpreting Prediction Market Prices as Probabilities** Justin Wolfers,Eric Zitzewitz,2006 While most empirical analysis of prediction markets treats prices of binary options as predictions of the probability of future events Manski 2004 has recently argued that there is little existing theory supporting this practice We provide relevant

analytic foundations describing sufficient conditions under which prediction markets prices correspond with mean beliefs. Beyond these specific sufficient conditions we show that for a broad class of models prediction market prices are usually close to the mean beliefs of traders. The key parameters driving trading behavior in prediction markets are the degree of risk aversion and the distribution of beliefs and we provide some novel data on the distribution of beliefs in a couple of interesting contexts. We find that prediction markets prices typically provide useful albeit sometimes biased estimates of average beliefs about the probability an event occurs.
