Positive Definite Unimodular Lattices With Trivial Automorphism Groups:

Positive Definite Unimodular Lattices with Trivial Automorphism Groups Etsuko Bannai, 1990 The existence of lattices with trivial automorphism group was shown by O Meara who gave an algorithm to construct such a lattice starting from any given lattice In this process the discriminants of the lattices increase in each step Biermann proved the existence of a lattice with trivial automorphism group in every genus of positive definite integral lattices of any dimension with sufficiently large discriminant In his proof the fact that the discriminant is very large is crucial We are instead interested in lattices with small discriminant

Orthogonal Decompositions and Integral Lattices Alexei Kostrikin, Pham Huu Tiep, 2011-06-01 The aim of the series is to present new and important developments in pure and applied mathematics Well established in the community over two decades it offers a large library of mathematics including several important classics The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question In addition they convey their relationships to other parts of mathematics The series is addressed to advanced readers wishing to thoroughly study the topic Editorial Board Lev Birbrair Universidade Federal do Cear Fortaleza Brasil Victor P Maslov Russian Academy of Sciences Moscow Russia Walter D Neumann Columbia University New York USA Markus J Pflaum University of Colorado Boulder USA Dierk Schleicher Jacobs University Bremen Germany

Imbeddings of Three-Manifold Groups Francisco González-Acuña, Wilbur Carrington Whitten, 1992 This paper deals with the two broad questions of how 3 manifold groups imbed in one another and how such imbeddings relate to any corresponding lowercase Greek π_1 injective maps In particular we are interested in 1 determining which 3 manifold groups are not cohopfian that is which 3 manifold groups imbed properly in themselves 2 determining the knot subgroups of a knot group and 3 determining when surgery on a knot K yields a lens or lens like space and the relationship of such a surgery to the knot subgroup structure of lowercase Greek π_1 S^3 K Our work requires the formulation of a deformation theorem for lowercase Greek π_1 injective maps between certain kinds of Haken manifolds and the development of some algebraic tools

Algebraic and Arithmetic Theory of Quadratic Forms Ricardo Baeza, 2004 This proceedings volume contains papers presented at the International Conference on the algebraic and arithmetic theory of quadratic forms held in Talca Chile The modern theory of quadratic forms has connections with a broad spectrum of mathematical areas including number theory geometry and K theory This volume contains survey and research articles covering the range of connections among these topics The survey articles bring readers up to date on research and open problems in representation theory of integral quadratic forms the algebraic theory of finite square class fields and developments in the theory of Witt groups of triangulated categories The specialized articles present important developments in both the algebraic and arithmetic theory of quadratic forms as well as connections to geometry and K theory The volume is suitable for graduate students and research mathematicians interested in various aspects of the theory of quadratic forms

Axiomization of Passage from

'Local' Structure to 'Global' Object Paul Feit, 1993 Requiring only familiarity with the terminology of categories this book will interest algebraic geometers and students studying schemes for the first time Feit translates the geometric intuition of local structure into a purely categorical format filling a gap at the foundations of algebraic geometry The main result is that given an initial category \mathcal{C} of local objects and morphisms there is a canonical enlargement of \mathcal{C} to a category \mathcal{C}_{gl} which contains all global objects whose local structure derives from \mathcal{C} and which is functorially equivalent to the traditional notion of global objects Using this approach Feit unifies definitions for numerous technical objects of algebraic geometry including schemes Tate's rigid analytic spaces and algebraic spaces

Orientation and the Leray-Schauder Theory for Fully Nonlinear Elliptic Boundary Value Problems Patrick Fitzpatrick, Jacobo Pejsachowicz, 1993-01-01 The aim of this work is to develop an additive integer valued degree theory for the class of quasilinear Fredholm mappings This class is sufficiently large that within its framework one can study general fully nonlinear elliptic boundary value problems A degree for the whole class of quasilinear Fredholm mappings must necessarily accommodate sign switching of the degree along admissible homotopies The authors introduce parity a homotopy invariant of paths of linear Fredholm operators having invertible endpoints The parity provides a complete description of the possible changes in sign of the degree and thereby permits use of the degree to prove multiplicity and bifurcation theorems for quasilinear Fredholm mappings Applications are given to the study of fully nonlinear elliptic boundary value problems

Enright-Shelton Theory and Vogan's Problem for Generalized Principal Series Brian D. Boe, David H. Collingwood, 1993 This book investigates the composition series of generalized principal series representations induced from a maximal cuspidal parabolic subgroup of a real reductive Lie group Boe and Collingwood study when such representations are multiplicity free Vogan's Problem 3 and the problem of describing their composition factors in closed form The results obtained are strikingly similar to those of Enright and Shelton for highest weight modules Connections with two different flag variety decompositions are discussed

Constant Mean Curvature Immersions of Enneper Type Henry C. Wente, 1992 This memoir is devoted to the case of constant mean curvature surfaces immersed in \mathbb{R}^3 We reduce this geometrical problem to finding certain integrable solutions to the Gauss equation Many new and interesting examples are presented including immersed cylinders in \mathbb{R}^3 with embedded Delaunay ends and n lobes in the middle and one parameter families of immersed constant mean curvature tori in \mathbb{R}^3 We examine minimal surfaces in hyperbolic three space which is in some ways the most complicated case

On the Existence of Feller Semigroups with Boundary Conditions Kazuaki Taira, 1992 This paper is devoted to the functional analytic approach to the problem of construction of Feller semigroups with Ventcel Wentzell boundary conditions This paper considers the non transversal case and solves from the viewpoint of functional analysis the problem of construction of Feller semigroups for elliptic Waldenfels operators Intuitively our result may be stated as follows One can construct a Feller semigroup corresponding to such a diffusion phenomenon that a

Markovian particle moves both by jumps and continuously in the state space until it dies at which time it reaches the set where the absorption phenomenon occurs G -Categories Robert Gordon,1993 A *G* category is a category on which a group *G* acts This work studies the 2 category *G* cat of *G* categories *G* functors functors which commute with the action of *G* and *G* natural transformations natural transformations which commute with the *G* action There is a particular emphasis on the relationship between a *G* category and its stable subcategory the largest sub *G* category on which *G* operates trivially Also contained here are some very general applications of the theory to various additive *G* categories and to *G* topoi *Algebra and Topology 1990* S.
