## **Receptors For Extracellular Matrix:**

**Receptors For Extracellular Matrix** John McDonald, 2012-12-02 Receptors for Extracellular Matrix covers the major receptor families and their potential biological functions. Composed of eight chapters, the book first discusses the structure and function of membrane-associated proteoglycans, focusing on two classes of integral membrane molecules, syndecan and CD44. It then examines the important area of mechanisms of signal transduction from integrin receptors that must mediate the effects of extracellular matrices and other ligands on cell behavior. Multidomain proteins of the extracellular matrix and their role in controlling cellular growth are also considered. This book also discusses the significant research developments in NCAM, the most abundant and widespread of the known vertebrate cell-cell adhesion molecules. The discussion particularly emphasizes the role of posttranslational glycosylation with polysialic acid in the function of the NCAM molecule that undergoes unusual and highly characteristic differences in glycosylation during development. Other chapters deal with the regulation of neural development by the extracellular matrix and the molecular basis of cell adhesion. This book includes discussions on the interaction of adhesion receptors with well characterized cellular recognition sites and extracellular ligands and cell migration occurring during embryogenesis, gastrulation, neural crest cell migration, neurite extension, lymphocyte migration, and wound healing. The concluding chapters address the wide array of integrin associations, their physiologic relevance, and structural aspects as well as the anchoring of integrins to the cytoskeleton. This book is of great value to cell biologists and researchers.

**Integrins** David A. Cheresh, Robert P. Mecham, 1994-09-26 Integrins: Molecular and Biological Responses to the Extracellular Matrix will help basic, applied, and clinical researchers keep up with the explosion of literature on the integrin family of proteins. This volume extends material previously covered in Receptors for Extracellular Matrix. It addresses some of the most exciting areas of integrin biology, including the varied roles of integrins in cell division, differentiation, movement, wound healing, inflammation, thrombosis, osteoporosis, and cancer. Describes key aspects of integrin structure, function, and biology. Covers collagen receptors, epithelial cell integrins, leukocyte integrins, platelet integrins, integrin signaling, and integrin antagonists. Investigates the expression and role of integrins during development and in the cytoskeleton. Includes the actions and influences of integrins in inflammation, thrombosis, and osteoporosis.

*Receptors of Cell Adhesion and Cellular Recognition* A.G. Lee, 1996-06-25 Volume 3 of Biomembranes covers receptors of cell adhesion and cellular recognition. Proteins in the plasma membrane of cells are heavily involved in processes of cell adhesion, but such proteins were not actually isolated and characterized until the mid 1970s. Since then, application of the methods of molecular biology has led to the recognition of four major classes of cell adhesion molecules (CAMs): the

immunoglobulin super family the cadherins the integrins and the selecting A convenient system in which to study the importance of cell adhesion is in blood platelets where aggregation eventually leads to thrombus formation in a process involving a range of surface glycoproteins Interaction with the extracellular matrix is exemplified by CD44 the receptor for hyaluronan and a complex carbohydrate that is a major component of the extracellular matrix surrounding migrating and proliferating cells Membrane associated mucins have a variety of effects on cell adhesion The super family of immunoglobulin related proteins also include the T cell receptors and the major histocompatibility complex MHC which together with the receptors for immunoglobulins the Fc receptors are of fundamental importance in the processes of immunity Volume 3 of Biomembranes explores the structures and functions of the molecules involved in these important functions of the cell

Malacinski,1990 Integrins and Ion Channels Andrea Becchetti,Annarosa Arcangeli,2010-12-28 Interdisciplinarity is more often invoked than practised This is hardly surprising considering the daunting vastness of modern biology To reach a satisfactory understanding of a complex biological system a wide spectrum of conceptual and experimental tools must be applied at different levels from the molecular to the cellular tissue and

organismic We believe the multifaceted regulatory interplay between integrin receptors and ion channels offers a rich and challenging field for researchers seeking broad biological perspectives By mediating cell adhesion to the extracellular matrix integrins regulate many developmental processes in the widest sense from cell choice between differentiation and proliferation to tissue remodeling and organogenesis Rapidly growing evidence shows that frequent communication takes place between cell adhesion receptors and channel proteins This may occur through formation of multiprotein membrane complexes that regulate ion fluxes as well as a variety of intracellular signaling pathways In other cases cross talk is more indirect and mediated by cellular messengers such as G proteins These interactions are reciprocal in that ion channel stimulation often controls integrin activation or expression From a functional standpoint studying the interplay between integrin receptors and ion channels clarifies how the extracellular matrix regulates processes as disparate as muscle excitability synaptic plasticity and lymphocyte activation just to mention a few The derangement of these processes has many implications for pathogenesis processes in particular for tumor invasiveness and some cardiovascular and neurologic diseases This book provides a general introduction to the problems and methods of this blossoming field
