Book Description

Standalone LLMs no longer deliver sufficient business value on their own. This guide moves beyond basic chatbots showing you how to build agentic ChatGPT grade systems capable of sophisticated semantic and sentiment analysis powered by context engineering. You'll design AI controller architectures with multi-user memory retention to dynamically adapt your system to diverse user and system inputs. You'll architect a Retrieval-Augmented Generation system with Pinecone to combine instruction-driven scenarios. Through context engineering, you'll minimize token usage, maximize response quality, and create systems that reason across complex tasks with precision. You'll enhance your system's intelligence with multimodal capabilities: image generation, voice interactions, and machine-driven reasoning, leveraging Chain of Thought and context chaining to address cross-domain automation challenges. You'll also integrate OpenAI's suite and DeepSeek R1 without disrupting your existing GenAI system ecosystem. With context engineering as the backbone, every step becomes a deliberate act of shaping model behavior. Your GenAI system will apply neuroscience-inspired insights to marketing strategies, predict human mobility, integrate smoothly into human workflows, and connect to live external data, all wrapped in a polished investor-ready interface.

What you will learn

- Implement an AI controller with a conversation AI agent and orchestrator at its core.
- Build contextual awareness with short-term, long-term, and cross-session memory.
- Design cross-domain automation with multimodal reasoning, image generation, and voice features.
- Expand a CoT agent by integrating consumer memory understanding.
