Satellites In Outer Space:

Satellites in Outer Space Isaac Asimov, 1960 A simple account of satellites from Sputnik to Apollo **Arms Control in Outer Space** United States. Congress. House. Committee on Foreign Affairs. Subcommittee on International Security and Scientific Affairs, 1984 *The Urgent Need for Regulation of Satellite Mega-constellations in Outer Space* Scott Millwood, 2023-02-21 This book calls for the urgent regulation of satellite mega constellations in outer space proposing a new model of international regulatory coordination in order to ensure the sustainable balance of science and advanced telecommunications We are currently witnessing expansion of the Internet off our planet The proliferation of new space based internet connectivity has been accompanied by much discussion about the potential impact on astronomy Scientists are increasingly concerned that mega constellations proposed by SpaceX OneWeb Amazon and Facebook might wreak havoc on scientific research and transform our view of the stars These commercial operators plan to launch hundreds of thousands of satellites into Low Earth Orbit LEO in the coming decade representing a 1000% increase on objects currently in orbit This book examines this new space race in the context of historical rivalries for it is clear that mega constellations are being actively pursued by a US administration determined to dominate LEO as tensions with China rise This creates a risk of interference with earth based scientific activities that use optical and radio frequency techniques to study the universe This book examines these developments in the context of the Outer Space Treaty OST which provides all States with the freedom of scientific investigation exploration and use of outer space while balancing this with obligations to avoid interference with the space activities of other States It draws upon interviews with some of Europe's leading astronomers in order to highlight the extent to which the issue will require legal and regulatory reform of mega constellation licensing processes to ensure the integrity of astronomical science is preserved The race to dominate LEO also comes at a time when the monopolistic power of Facebook Amazon and other TechGiants is under renewed scrutiny in western democracies The author argues that a new governance framework for launch and operational licenses is urgently required in which impact risk assessments scale and proportionality and stakeholder consultation processes should play important roles It is now vital that the astronomical community whose skill set does not generally involve leading regulatory strategies engage with those who can support its leadership in exerting a renewed influence The diplomacy of science which played a vital role during the Cold War and the establishment of global commons must be reinvigorated for the New Space era It is now vital that the astronomical community whose skill set does not generally involve leading regulatory strategies engage with those who can support its leadership in exerting a renewed influence The diplomacy of science which played a vital role during the Cold War and the establishment of global commons must be reinvigorated for the New Space era It is now vital that the astronomical community whose skill set does not generally involve leading regulatory strategies engage with those who can support its leadership in exerting a renewed influence The diplomacy of science which played a vital role during the Cold War and the

The New Laws of Outer Space Ugo Pagallo, 2024-11-14 This book maps out the moral legal and societal issues brought forth by the use of autonomous systems such as AI and smart robots in outer space Humanity is on the brink of a new space era in which projects for permanent human colonies on the Moon and space missions with autonomous AI systems will soon become a reality Principles and provisions of international space law fall increasingly short in tackling this scenario Experts and institutions have recommended improvements to the legal framework such as new international agreements or policies that would not require any amendment to conventional law Most of the time such proposals and recommendations overlook the challenges posed by technology and how autonomous and intelligent systems in outer space require moral and legal standards of their own This book argues that the traditional focus on satellite communications space related services and the appropriability of celestial

resources needs to be integrated by new laws of outer space regulating cybersecurity law and environmental law data governance and consumer protection The new laws of outer space will increasingly concern the development of new standards for the behaviour and decision making of AI systems and smart robots with and without humans aboard deep space missions and in next generation colonies What laws shall govern us out there in a new terra incognita This is the question that the book sets out to answer **Outer Space - A New Dimension of the Arms Race** Bhupendra Jasani,2021-01-26

This book first published in 1982 analyses the prospects of the Cold War superpowers arms race spilling into outer space A SIPRI organized symposium in 1981 discussed the consequences of the militarization of outer space as well as further arms control and disarmament measures This book presents the findings of 20 eminent scientists lawyers and diplomats from 12 different countries Satellite Communications and Outer Space Govind Narain Sharma,1988 **Maintaining Outer**

Space for Peaceful Uses Nandasiri Jasentuliyana,United Nations University,1984 The Future of Outer Space Law Anna Marie Brennan,2025-06-27 This book identifies and discusses problems and opportunities for the future theory and practice of outer space law The corpus of outer space law including the Outer Space Treaty 1967 has faced multiple challenges and critiques In recent times these have included advances in technology the militarisation of outer space space debris and geopolitics The prominent and emerging contributors to this collection draw on diverse research frameworks to discuss proposals for the future of outer space law and policy These include addressing regulatory gaps and under examined and emerging areas of the law but also beyond the Outer Space Treaty especially related to potential extraterrestrial settlements satellites technology self defence self determination and the environment The book discusses the tensions between universalism and localisation as well as the regionalisation of outer space law and policy and how these approaches might adapt to create a dynamic space industry for the future This book is both practical and theoretical in scope and will be of interest to academics researchers and students It will also be of interest to international organisations diplomats and other government officials and policymakers **Encyclopedia of Space and Astronomy** Joseph A.
