Pediatric : basic trauma life support Ann Marie Dietrich, Steven Shaner, 1998-08-01 Pediatric trauma care is unique in several ways. Not only must you learn how to communicate with various ages of pediatric patients but you also must learn how to communicate with the parents that accompany them. Because children's anatomy and activities are different than adults, they suffer different injuries. This book covers the special needs of the injured child. Forward [Basic Trauma Life Support for Paramedics and Other Advanced Providers](#) John E. Campbell, 2000 For courses in Basic Trauma Life Support and Paramedic courses. This textbook offers Paramedics and advanced providers a complete course covering all the skills necessary for rapid assessment, resuscitation, stabilization, and transportation of the trauma patient. The fourth edition has been updated and revised to include the latest information on spinal trauma, thoracic trauma, pediatrics, head trauma, airway management, bloodborne pathogens, multicase incidents, and triage. It also covers three new skills: using a pulse oximeter, a laryngeal mask airway, and the new adult intraosseous infusion device. This field-tested book conforms to the latest DOT curriculum with a completely revised chapter on patient assessment and a new chapter that integrates the mechanisms of injury into the complete process of evaluating the injury scene. **Cumulated Index Medicus**, 1991 **Official**
