## **Electric Vehicle Macbook Compare:**

*The Global Automotive Industry* Paul Nieuwenhuis, Peter Wells, 2015-08-06 The automotive industry is still one of the world's largest manufacturing sectors but it suffers from being very technology focused as well as being relatively short term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist researchers both from academia and business review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector closely tied in with the fortunes of both established and newly emerging economies. In doing so it covers issues related to manufacturing both established practices as well as new developments, issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends and crucially labour practices and the people who build cars. In all this it explains both how the current situation arose and also likely future trajectories both in terms of social and regulatory trends as the technological, marketing and labour practice responses to those leading in many cases to the development of new business models. Key features: Provides a global overview of the automotive industry covering its current state and considering future challenges. Contains contributions from international specialists in the automotive sector. Presents current research and sets this in an historical and broader industry context. Covers threats to the industry including globalization, economic and environmental sustainability. The Global Automotive Industry is a must have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments and graduate and undergraduate students in automotive engineering.

*Green Services Engineering, Optimization, and Modeling in the Technological Age* Liu, Xiaodong, Li, Yang, 2015-07-07 Concerns surrounding environmental sustainability have led to an increase of interest in environmentally friendly systems. In the ICT realm, attention has been largely paid to green aspects of hardware; however, it is equally necessary to address this issue from the software perspective. *Green Services Engineering, Optimization, and Modeling in the Technological Age* is a valuable reference source of the latest scholarly research on the implementation of green processes into software systems, contributing novel principles, methodologies and tools to improve software development. Featuring comprehensive and timely coverage on various areas in service strategy and modeling, engineering and sustainability, this publication is a pivotal reference source for researchers, practitioners, advanced level students and end users in the software development realm.
