Electric Vehicles Robin Cowan, Staffan Hultén, 2000 *Electric Vehicles* provides a reasoned look at both the history of the choice of automobile technologies and the prospects for changing that choice. In particular it addresses the possibility of the electrical vehicle becoming a significant part of the transportation system. Its contributors evaluate this question from a variety of perspectives all of which need to be absorbed before a comprehensive understanding of the problems and prospects for the electrical vehicle can be achieved.

Electric Vehicle Developments, 1979 **Electric Vehicles** Michael A. Hackleman, 1977 *The Electrical Engineer*, 1892 *Proceedings of the ... International Electric Vehicle Symposium*, 1992 **Domestic installation of a photovoltaic system for charging electronic vehicles**, 2024-09-02

Seminar paper from the year 2017 in the subject Electrotechnology grade 1.7 University of Bremen Institut Technik und Bildung language English abstract

At what point is it worth upgrading the electrical installation and purchasing an electric car for everyday use? This question will arise for many owners or future owners of a detached house in the near future. It is not only interesting from an economic point of view but also from an ecological one. The following assumptions are made for the scientific work: The electric car is needed for the daily commute from home to work and the extension of the house installation by a photovoltaic system. PVA complies with the standard of the German Association for Electrical Electronic Information Technologies VDE. We assume the following scenario for the housework: The detached house is located in northern Germany, the roof is south facing with the optimum tilt angle of 30° and an average electricity consumption for two adults and two children. The commuting person works during the week during the day in a company that is 60 kilometres one way from home. This leads to the hypothesis that the monthly petrol costs can be reduced by purchasing an electric car and a PVA. This leads to the following key question: Is it financially worthwhile to expand the electrical home installation with a photovoltaic system for charging an electric car?
