**GPU Parallel Program Development Using CUDA** Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs. This approach prepares the reader for the next generation and future generations of GPUs. The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific. At the same time, the book also provides platform dependent explanations that are as valuable as generalized GPU concepts. The book consists of three separate parts; it starts by explaining parallelism using CPU multi threading in Part I. A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads. Multiple ways of parallelizing the same task are analyzed and their pros and cons are studied in terms of both core and memory operation. Part II of the book introduces GPU massive parallelism. The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated. Because the core and memory structures of CPUs and GPUs are different, the results differ in interesting ways. The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs. Part III of the book provides pointers for readers who want to expand their horizons. It provides a brief introduction to popular CUDA libraries such as cuBLAS, cuFFT, NPP, and Thrust, the OpenCL programming language, an overview of GPU programming using other programming languages and API libraries such as Python, OpenCV, OpenGL, and Apple's Swift and Metal, and the deep learning library cuDNN.

**Event-Database Architecture for Computer Games** Rodney Quaye, 2025-07-25 Event Database Architecture for Computer Games proposes the first explicit software architecture for game development, answering the problem of building modern computer games with little or no game design. In this volume, an example of a practical production process based on the software production process is explained, including examples of the game design, technical design, data design, and tools design in that process. This volume includes a brief overview on how to optimise the results. This leads on to an exploration of how staff, especially Software Engineers, typically view optimisation. It also explains how the vision of the Engineers relates to the vision of the leadership of a project or company. It describes how this leadership can also affect the efficacy of a production process, including the Event Database Production Process. This book will be of great interest to professional game developers involved in management roles such as Technical Directors and Game Producers, and technical roles such as Tools Programmers, UI Programmers, Gameplay Programmers, and Engineers, as well as students studying game development and programming. Rodney Quaye is Senior Software Development Engineer in Test at Build A Rocket Boy. He has worked in the Computer Games industry for over 16 years. He has worked at several Games Studios including Sumo Digital, nDreams, Supermassive Games, Traveller's Tales, Hotgen, Oysterworld, Second Impact, Flaming Pumpkin, Goldhawk Interactive, Jagex, Gusto Games, Criterion, Asylum Entertainment, Codemasters, and Deibus Studios. The famous titles he has worked on include
