## **Selected Papers Of S A Amitsur With Commentary:**

Selected Papers of S.A. Amitsur with Commentary Shimshon A. Amitsur, 2001      *Collected Works of William P. Thurston with Commentary* Benson Farb, David Gabai, Steven P. Kerckhoff, 2023-06-08 William Thurston's work has had a profound influence on mathematics. He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry, topology, foliations, group theory, dynamical systems, and the way these areas interact. His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy. This four-part collection brings together in one place Thurston's major writings, many of which are appearing in publication for the first time. Volumes I-III contain commentaries by the Editors. Volume IV includes a preface by Steven P. Kerckhoff. Volume III contains William Thurston's papers on dynamics and computer science and papers written for general audiences. Additional miscellaneous papers are also included, such as his 1967 New College undergraduate thesis which foreshadows his later work.

**Collected Papers of John Milnor** John Willard Milnor, 1994      *The Geometry and Topology of Three-Manifolds* William P. Thurston, 2023-06-16 William Thurston's work has had a profound influence on mathematics. He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry, topology, foliations, group theory, dynamical systems, and the way these areas interact. His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy. This four-part collection brings together in one place Thurston's major writings, many of which are appearing in publication for the first time. Volumes I-III contain commentaries by the Editors. Volume IV includes a preface by Steven P. Kerckhoff. Volume IV contains Thurston's highly influential, though previously unpublished 1977-78 Princeton Course Notes on the Geometry and Topology of 3-manifolds. It is an indispensable part of the Thurston collection but can also be used on its own as a textbook or for self study.

*The Selected Works of Phillip A. Griffiths with Commentary: Differential systems* Phillip Griffiths, 2003  
*Value Functions on Simple Algebras, and Associated Graded Rings* Jean-Pierre Tignol, Adrian R. Wadsworth, 2015-04-03 This monograph is the first book-length treatment of valuation theory on finite-dimensional division algebras, a subject of active and substantial research over the last forty years. Its development was spurred in the last decades of the twentieth century by important advances such as Amitsur's construction of noncrossed products and Platonov's solution of the Tannaka-Artin problem. This study is particularly timely because it approaches the subject from the perspective of associated graded structures. This new approach has been developed by the authors in the last few years and has significantly clarified the theory. Various constructions of division algebras are obtained as applications of the theory, such as noncrossed products and indecomposable algebras. In addition, the use of valuation theory in reduced Whitehead group calculations after Hazrat and Wadsworth and in essential dimension computations after Baek and Merkurjev is showcased. The intended audience consists of graduate students and research mathematicians.

The Selected Works of Phillip A. Griffiths with Commentary

Phillip Griffiths, 2003 Over the last four decades Phillip Griffiths has been a central figure in mathematics During this time he made crucial contributions in several fields including complex analysis algebraic geometry and differential systems His books and papers are distinguished by a remarkably lucid style that invites the reader to understand not only the subject at hand but also the connections among seemingly unrelated areas of mathematics Even today many of Griffiths papers are used as a standard source on a subject Another important feature of Griffiths writings is that they often bring together classical and modern mathematics The four parts of Selected Works Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems are organized according to the subject matter and are supplemented by Griffiths brief but extremely illuminating personal reflections on the mathematical content and the times in which they were produced Griffiths Selected Works provide the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century
