*Acquired Immunodeficiency Syndrome (AIDS)* Charlotte Kenton, 1985      *Vaccines and Diagnostics for Transboundary Animal Diseases* J.A. Roth, J.A. Richt, I.A. Morozov, 2013-04-18 Transboundary animal diseases TADs are a major threat to livestock. They are highly contagious or transmissible and they have the potential to cause high morbidity and mortality in both susceptible animal populations and humans. In addition, not only are TADs detrimental to national economies, they are also a serious threat to world food security. This volume presents the proceedings of an international workshop on Vaccines and Diagnostics for Transboundary Animal Diseases that was held in Ames, Iowa, USA, in 2012. Experts and scientists from academia, industry, and government reviewed the current status of vaccines and diagnostics for high priority TADs, decision making and regulatory processes for veterinary biologics, and the roles and responsibilities of government agencies. The discussions also addressed achievements and gaps in vaccine and diagnostics development for 11 important TADs, as well as the translation of research findings into licensed novel vaccines and diagnostics for high priority TADs.      *Literature Search* National Library of Medicine (U.S.), 1984      *Mid-market CEO Challenge* Henry M. Silvert, Greg Karpain, 2006      **Swine Influenza** Jürgen A. Richt, Richard J. Webby, 2014-07-08 From the first detailed clinical description of the disease in the Midwestern United States in 1918 to the isolation of the causative agent, the first of any influenza virus in 1930 to its role in the genesis of the 2009 human pandemic, swine have played a central role in the ecology of influenza. Although not considered the major natural reservoir for influenza A viruses, swine are host to a limited but dynamic assortment of viruses. A number of subtypes of influenza A viruses of human and avian origin, including H1N1, H2N2, H3N1, H3N2, H5N1, H7N9, and H9N2, have been isolated from global swine populations. Most of these isolations have, however, been limited in number, and it is only H1N1 and H3N2 influenza viruses that are known to have formed stable lineages in swine. In this respect, swine influenza viruses (SIV) are similar to their counterparts in humans, where H1N1 and H3N2 viruses have also been maintained. The nature of these H1N1 and H3N2 viruses differs between the two host populations, however, and as discussed throughout this book, are even different in swine populations in different geographic regions of the world due to multiple introductions of avian and human influenza viruses.      *Motor Trend*, 1987      **Performance of Protective Clothing** Jeffrey O. Barrett, Lawrence R. Stanberry, 2009-03-05 The last 20 years has seen a rapid increase in infectious diseases, particularly those that are termed emerging diseases such as SARS, neglected diseases such as malaria, and those that are deemed biothreats such as anthrax. It is well recognized that the most effective modality for preventing infectious diseases is vaccination. This book provides researchers with a better understanding of what is currently known about these diseases, including whether there is a vaccine available or under

development It also informs readers of the key issues in development of a vaccine for each disease Provides a comprehensive treatise of the agents that are responsible for emerging and neglected diseases and those that can be used as biothreats Includes the processes such as the vaccine development pathway vaccine manufacturing and regulatory issues that are critical to the generation of these vaccines to the marketplace Each chapter will include a map of the world showing where that particular disease is naturally found     Applied and Environmental Microbiology ,1992     Canada Poultryman ,1988
